CONTENTS

1. Chapter I. Introduction ........................................................................................................... 1-14
   1.1 Staphylococci: Discovery ................................................................................................. 2
   1.2 Staphylococcus aureus Infections .................................................................................... 2
   1.3 Milestones in the History of Antibiotics ......................................................................... 4
      1.3.1 Beginning of antibiotic era ....................................................................................... 4
      1.3.2 Antibiotic resistance ............................................................................................... 6
   1.4 Impact of Increasing Antibiotic Resistance .................................................................... 8
   1.5 Antimicrobial Resistance Surveillance ............................................................................ 10
   1.6 Tribal Region Bastar ..................................................................................................... 11
      1.6.1 Geographic Location .................................................................................................. 11
      1.6.2 History ..................................................................................................................... 11
      1.6.3 Demographics .......................................................................................................... 13
      1.6.4 Health status ........................................................................................................... 13

2. Chapter II. Review of Literature ......................................................................................... 15-48
   2.1 Microbiology of Staphylococcus aureus ......................................................................... 16
      2.1.1 Morphology ............................................................................................................ 16
      2.1.2 Taxonomy ............................................................................................................... 17
      2.1.3 Culture characteristics ............................................................................................ 17
      2.1.4 Biochemical reactions ............................................................................................. 19
# 2.1.5 Pathogenesis

2.1.5.1 *S. aureus* infections .......................................................... 20

2.1.5.2 Nosocomial and community associated infections .................... 23

2.1.5.3 Virulence factors in *S. aureus* ........................................... 24

# 2.2 Antibiotic Resistance Potential in *S. aureus*

2.2.1 ß-lactam antibiotics: penicillin and methicillin .......................... 30

2.2.2 Vancomycin (glycopeptides) ....................................................... 32

2.2.3 Fluoroquinolones ....................................................................... 34

2.2.4 Linezolid (oxazolidinones) .......................................................... 35

2.2.5 Macrolides, lincosamides, and streptogramins ............................... 35

2.2.6 Trimethoprim-sulfamethoxazole ................................................. 37

2.2.7 Aminoglycosides ........................................................................ 38

2.2.8 Tetracyclines ............................................................................. 38

# 2.3 Epidemiology

2.3.1 Source of infection ..................................................................... 39

2.3.1.1 Infected lesions ....................................................................... 39

2.3.1.2 Healthy carriers ....................................................................... 39

2.3.1.3 Animals ................................................................................ 42

2.3.1.4 Fomites .................................................................................. 42

2.3.2 Mode of infection ....................................................................... 42

2.3.3 Methicillin resistant *S. aureus* (MRSA) ....................................... 42

2.3.3.1 Global prevalence of MRSA ...................................................... 43

2.3.3.2 Prevalence of MRSA in India .................................................... 44
3. Chapter III. Materials and Methods ................................................. 49-70

3.1 Literature Search ........................................................................... 50
  3.1.1 Online resources ...................................................................... 50
  3.1.2 Offline resources ..................................................................... 50
3.2 Sample Collection and Processing ................................................. 51
  3.2.1 Pus and wound swab............................................................... 51
  3.2.2 Urine ....................................................................................... 51
  3.2.3 Blood ...................................................................................... 52
  3.2.4 Throat swab ............................................................................ 53
3.3 Culture Media and Methods .......................................................... 53
  3.3.1 Media preparation ................................................................... 53
  3.3.2 Subculturing and maintenance of the isolates ......................... 58
3.4 Identification of S. aureus Isolates ............................................... 60
  3.4.1 Gram staining ......................................................................... 60
    3.4.1.1 Procedure ......................................................................... 60
  3.4.2 Catalase test ........................................................................... 63
    3.4.2.1 Procedure ......................................................................... 63
  3.4.3 Coagulase test ........................................................................ 64
    3.4.3.1 Procedure ......................................................................... 64
  3.4.4 Mannitol salt agar (MSA) culture .............................................. 66
  3.4.5 Latex agglutination test ......................................................... 66
3.5 Detection of Antibiotic Resistance ................................................. 69
  3.5.1 MRSA screening ..................................................................... 69
    3.5.1.1 Oxacillin screen agar ......................................................... 69
    3.5.1.2 Cefoxitin disk diffusion test .............................................. 69
3.5.2 Antibiotic susceptibility testing ............................................................... 69
  3.5.2.1 Disk diffusion test by Kirby-Bauer method ........................................... 69
  3.5.2.2 Etest method ......................................................................................... 70

4. Chapter IV. Results and Statistical Analysis ..............................................71-144
  4.1 Processing of Clinical Samples ................................................................. 72
  4.2 Study Population ....................................................................................... 72
  4.3 Prevalence of *Staphylococcus aureus* ...................................................... 73
    4.3.1 In studied population ............................................................................. 73
    4.3.2 In clinical samples ................................................................................. 73
    4.3.3 In male subjects ...................................................................................... 75
    4.3.4 In female subjects .................................................................................. 75
  4.4 Prevalence of Methicillin Resistant *S. aureus* (MRSA) ......................... 76
    4.4.1 In studied population ............................................................................. 76
    4.4.2 In clinical samples ................................................................................. 76
    4.4.3 In male subjects ...................................................................................... 77
    4.4.4 In female subjects .................................................................................. 77
  4.5 Prevalence of Methicillin Sensitive *S. aureus* (MSSA) ......................... 78
    4.5.1 In studied population ............................................................................. 78
    4.5.2 In clinical samples ................................................................................. 78
    4.5.3 In male subjects ...................................................................................... 79
    4.5.4 In female subjects .................................................................................. 79
  4.6 Antibiotic Susceptibility ............................................................................ 80
    4.6.1 In studied *S. aureus* isolates ............................................................... 80
      4.6.1.1 Total isolates ...................................................................................... 80
    4.6.2 In the isolates from clinical samples ..................................................... 82
4.6.2.1 Pus ................................................................. 82
4.6.2.2 Urine .............................................................. 83
4.6.2.3 Blood .............................................................. 84
4.6.2.4 Wound .............................................................. 85
4.6.2.5 Throat swab ..................................................... 87
4.6.3 In the isolates from the study population ......................... 87
4.6.3.1 MRSA .............................................................. 87
  Male subjects ............................................................ 87
  Female subjects .......................................................... 90
4.6.3.2 MSSA .............................................................. 92
  Male subjects ............................................................ 92
  Female subjects .......................................................... 95
4.7 Statistical Analysis ................................................................ 97

5. Chapter V. Discussion and Conclusion ................................. 145-154
6. Appendix ........................................................................... 155-205
7. References .......................................................................... 206-232
8. List of Publications with Reprints ........................................ 233-234
