List of Tables

1. Comparison of thematic information in the map prepared through visual interpretation of aerial photographs, satellite imageries, and digitally classified output.

2. Image interpretation key for different land-cover classes using pan-chromatic B&W aerial photographs.

3. Image interpretation key for landcover mapping using FCC.

4. For accuracy evaluation of digital image processing, confusion matrix developed showing percentage of pixel going into different classes.

5. Area estimation of different cover classes obtained through different remotely sensed data.

6. Mean values of abundance, density, basal area, frequency and IVI of Shola forests in different localities.

7. Phytosociological data of Shola forests- locality: Naikollymala

8. Phytosociological data of Shola forests- locality: Anamudi

9. Phytosociological data of Shola forests- locality: Umayamala

10. Phytosociological data of Shola forests- locality: Turner's valley

11. Phytosociological data of Shola forests- locality: Eravikulam

12. Phytosociological data of Shola forests- locality: Rajamala

13. Phytosociological data of Shola forests- locality: Puvar

14. Basal area of Shola forests in different localities.

15 Family Important Values (FIV) of Shola forests.

16 Constancy values of Shola forests
17. Raunkier’s percentage frequency classes.

18. Distribution pattern of species of Shola forests and sub-tropical forests

19. Maturity index, Diversity index and Continuum index values of Shola forests.

20. Matrix of similarity and dissimilarity.

21. Floristic diversity of shola forests

22. Phyto-sociological data of sub-tropical hill forest.

23. Family important value (FIV) of sub-tropical hill forest

24. Floristic diversity of sub-tropical hill forest

25. Grassland community -type 1

26. Grassland community -type 2

27. Grassland community -type 3

28. Comparison of vegetation characteristic of other tropical forests in India

29. Comparison of vegetation characteristic of Shola forests and subtropical hill forest.
