LIST OF TABLES

Table 2.1  Diameter and appropriate size of four types of soil particles .................................. 11
Table 2.2  Water Quality Standards as approved by Bureau of Indian Standards ..................... 26
Table 2.3  Standards for Irrigation waters .............................................................................. 27
Table 2.4  Soil pH and Interpretation ....................................................................................... 30
Table 2.5  Limits for different nutrient parameters of soil ....................................................... 32
Table 3.1  Particle Size Distribution of Soils as per IS Classification ....................................... 35
Table 3.2  Particle Size Distribution of Soils as per Textural Classification / Modified Textural Classifications ........................................................................................................ 46
Table 3.3  Physical Properties of Soil ...................................................................................... 46
Table 3.4  pH Value and Nutrients of Soil Samples .................................................................. 47
Table 3.5  Quality of Water Used ........................................................................................... 48
Table 3.6  Chemical Composition of CP, CC and VC ............................................................ 51
Table 4.1  Textural Classification of Soils ............................................................................... 75
Table 4.2  Relation between Relative Density, Porosity and Field capacity ......................... 77
Table 4.3  Dry Densities and Field Densities of Different Soils ................................................ 78
Table 4.4  Results of Available Water ..................................................................................... 88
Table 4.5  Saturated Water Content and Field Capacity .......................................................... 97
Table 4.6  Hydraulic Conductivity of Various Soils .................................................................. 98
Table 4.7  OC, pH, NPK, CA and C EC Values of Soils on and after Three Months of Watering .......................................................... 101
Table 4.8  Comparison between Water Used and Effluent Water .......................................... 103
Table 5.1  Water Retention Characteristics of Admixtures and Soils ..................................... 107
Table 5.2  Improvement of Plant Available Water with admixtures ...................................... 109
Table 5.3  Increase in FC, PWP, PAW for addition of 10% coir pith ......................................... 139
Table 5.4  Increase in FC, PWP, PAW for addition of 10% coir pith compost ......................... 142
Table 5.5  Increase in FC, PWP, PAW for addition of 10% vermi compost ............................... 144
Table 5.6  Increase in PAW for the three admixtures .............................................................. 145
Table 5.7  Effect of CP on pH value, Nutrients and Cation Exchange Capacity of Soils .......... 148
Table 5.8  Effect of Coir pith Compost on pH value, Nutrients and Cation Exchange Capacity of Soils ........................................................................................................ 153
Table 5.9  Effect of Vermi Compost on pH value, Nutrients and Cation Exchange Capacity of Soils........................................................................................................ 158
Table 5.10 Effects of pH value and Nutrients on Soil With 10% Coir Pith ................................. 162
Table 5.11 Effect of pH value and Nutrients on Soil With 10% Coir Pith Compost ................. 163
Table 5.12  Effect of pH value and Nutrients on Soil With 10% Vermi Compost.........................163
Table 5.13  Effect of Admixtures on the Hydraulic Conductivity of Different Soils..............168
Table 5.14  Effect of CP on pH, OC, and CEC before and after Planting.............................170
Table 5.15  Effect of CP on N, P, K, Ca before and after Planting.......................................171
Table 5.16  Effect of CC on pH, OC, and CEC before and after Planting.............................173
Table 5.17  Effect of CC on N,P,K and Ca before and after Planting.......................................174
Table 5.18  Effect of VC on pH, OC, and CEC before and after Planting.............................175
Table 5.19  Effect of VC on N,P,K and Ca before and after Planting.......................................176
Table 5.20  Effect of CP on Effluent Water for S1 after Planting........................................179
Table 5.21  Effect of CP on Effluent Water for S2 after Planting........................................180
Table 5.22  Effect of CP on Effluent Water for S3 after Planting........................................181
Table 5.23  Effect of CP on Effluent Water for S4 after Planting........................................181
