Acknowledgements

I express my gratitude to all the people and organisations who have helped me at various stages of this present piece of research.

I am indeed fortunate to have Drs Ghazala Shahabuddin and Ajith Kumar as my supervisors: I am indebted to them for their unceasing encouragement, patience, and intellectual inputs, right from the time when this work was a nascent proposal right up to the present. Thanks are also due to Dr K. Ullas Karanth, for providing his constant support to my work.

I thank the Wildlife Conservation Society for providing financial support to this work through a research fellowship, and the Centre for Wildlife Studies for giving a small grant for a pilot study.

Dr Dhananjai Mohan, who first kindled my interest in birds, continued to provide invaluable advice to my woodpecker research, both from the perspective of a forest manager and as a bird ecologist. His encyclopaedic knowledge of the sub-Himalayan tract and its avifauna was of immense help in selecting the study area.

Dr V. Santharam provided me with much-needed practical advice on woodpecker research and shared vital reading material when papers were hard to find. Discussions with Drs Martjan Lammertink, R. Jayapal, Suhel Quader, T.R. Shankar Raman and Rashid Raza were also really productive in shaping my study.

The work dealing with call playback surveys would not have been possible without the help of Sh. Pratap Singh, whose experience in bird acoustics is unparalleled. He advised me about recording techniques and equipment, and was glad to share his bird call recordings.
My field station in Ramnagar was more like home, all thanks to the Bhatt family, who not only let me have a portion of their house to stay in but also provided me with sumptuous food. Living with the Bhatts and taking part of their festivals gave me a great opportunity to appreciate the rich Kumaoni culture (Holi was an extremely memorable event).

Planning fieldwork would have been extremely difficult had I not had Rajesh Bhatt to guide me. Rajesh and Bachi Bisht, with their thorough knowledge of the Ramnagar-Corbett area and its wildlife, helped me scout for field sites and assisted me with habitat sampling. They were always ready to help arrange local logistics and coordinate with the forest department staff.

My field assistants, Bhaskar Bhatt and Mohan Joshi, enthusiastically shared the effort of hundreds of kilometres of transect sampling for woodpeckers and the long days of habitat enumeration. They remained by my side even when we were being chased by elephants and tigers.

My friend, Malvika Onial, took out time from her own intensive fieldwork to help me with vegetation sampling. I also depended on her a lot to access research papers and references during the writing stage.

The Uttarakhand Forest Department helped me at all levels. I am grateful to Sh. Shreekant Chandola (PCCF–Wildlife) and Sh. Paramjit Singh (CCF–Wildlife) for granting permissions to carry out fieldwork. I owe gratitude to Sh. Rajiv Bharatari (Director–Corbett Tiger Reserve) and Dr Parag Dhakate (Dy. Director–CTR) for their help. They very kindly let me use the Park accommodation and deputed guards to accompany me during fieldwork in Corbett. Sh. U.C. Tiwari, Sh. Kandpal and Sh. Pant (Range Officers) readily extended their cooperation in
Corbett. Sh. Prakash Bhatnagar (CCF Kumaon), Sh. N.N. Pandey (DFO Terai West), Dr S. Gupta and Sh. Ghanshyam Rai (DFOs Ramnagar), and Sh. Narendra Singh (Principal–Training Centre, Kalagarh) were also very supportive during my work in the territorial divisions. I am also thankful to Sh. Kailash Joshi of the CTR Research Wing, and the frontline staff, particularly, Sh. Moti Singh, Sh. Kirola, Sh. Gopal Bisht, Sh. Dharampal, Sh. Nandan Bisht, Sh. Puran Singh, Sh. Mohan Uperti, Sh. Mohan Pandey, Sh. Umesh Joshi, Sh. Pant and Sh. Prakash Arya, who assisted me at various stages of fieldwork.

Post-fieldwork, I was fortunate to spend time at the Centre for Ecological Sciences of the Indian Institute of Science, Bangalore. This provided me a much-needed academic atmosphere and a chance to interact with a 'mixed flock' of ecologists. I thank Dr Kavita Isvaran for very generously giving me visitorship to her lab. Attending her course on quantitative ecology introduced me to R programming, which helped me tremendously in data analysis. In addition, one-to-one discussions with her have helped improve the analytical portions of this thesis.

Hari Sridhar found time to go through the thesis manuscripts and gave insightful suggestions. I also benefitted from discussions with Rohit Naniwadekar, Abishek Harihar, Mousumi Ghosh, Meena V., Sushma H.S., Umesh Srinivasan, Devcharan Jathanna, and Drs Rhett Harrison, Trevor Price and Barry Noon. I am grateful to Drs Anindya Sinha and Jagdish Krishnaswamy for helping me at various stages. Dr Sachin Gupta of Forest Research Institute, Dehradun, helped me access forest records and compartment histories.

The Conservation Leadership Programme supported me in presenting part of my work at the Society for Conservation Biology conference. I also gained a lot
during the CLP sponsored workshop on paper writing (during which I received critical comments from Drs Martin Fisher and Charudutt Mishra), and a workshop on presentation skills by Dr Geoff Hyde. The conference Young Ecologists Talk and Interact gave me another constructive forum to discuss my work among peers.

Among friends at CES, I thank Shreekant Deodhar, Suman A., Jayabarathy R., Sneha Vijayakumar, S.P. Vijayakumar, Jahnvi Joshi, Smita Nair, Sandhya Sekar, Anusha Krishnan, Yuvaraj R., Chaitanya Krishna and Lakshy Kataria. Special thanks to Mahua Ghara and Joyshree Chanam for providing cheer and sportingly accompanying me for tea on countless occasions.

Manoj Rawat made a wonderful watercolour illustration of the sal forest woodpeckers which was developed into a poster. Useful inputs regarding thesis format were provided by Sh. N. Samba Kumar and Bharath Sundaram.

On the personal front, I appreciate the support of my parents Ravindra Kumar and Kiran Arora, my uncle Rajendra Pal and my in-laws Prasad and Jayashree. I am grateful to Smitha and Jyothi Prasad for their constant support. My friends, particularly Abhas Mehrotra, Manoj Nair, M.D. Madhusudan, Vena Kapoor and the Onial family provided the much-needed encouragement.

Most importantly, my wife Soumya Prasad contributed immensely to this work all through, right from the time when I first discussed it with her during a train journey from Dehradun to Delhi. She has helped me design the study, and analyse critical sections – all this when she herself was neck-deep into her own PhD work.
