LIST OF TABLES

1. Suicide rate per 100,000 in different countries
2. Suicide rate in India per 1,00,000 population
3. District wise suicide rate in Kerala per 100000
4. Sample characteristics
5. Details regarding suicide attempt and current psychiatric diagnosis of attempters
6. Prevalence of individual life events in attempters versus normals
7. Comparison of different types of life events score of attempters versus normals
8. Correlation of different types life event score with other significant variables
9. Comparison of different types of life event score in different age groups
10. Comparison of different types of life events score ofattempters versus normals in adolescents
11. Comparison of different types of life events in attempters versus normals in youths and adults
12. Comparison of different types of life event scores of attempters and normals in different age groups
13. Life events score of male versus female attempters and normals
14. Social Support variables
15. Comparison of social support score of attempters versus normals
16. Correlation of different types of social support score with other variables
17. Comparison of social support score of male versus female
18. Comparison of different types of social support score in different age groups
19. Comparison of different types of social support scores of attempters versus normals in different age groups
20. Comparison of coping pattern between attempters and normals
21. Comparison of coping style scores of male versus female in attempters and normals
22. Comparison of different coping style scores in different age groups
23. Comparison of different types of coping behavior in attempters versus normals
24. Correlation of different coping pattern with other significant variables
25. Comparison of quality of life between attempters and normals
26. Comparison of different domains of QOL in different age groups
27. Comparison of different domains of QOL of attempters versus normals in different age groups
28. Comparison of quality of life score of male versus female in attempters and normals
29. Correlation of different domains of QOL with other significant variables
30. Stepwise Conditional Logistic Regression Analysis of Risk Factors in suicide attempters
