ACKNOWLEDGEMENTS

I take this opportunity to remember the Almighty, who bestowed strength, courage and perseverance to undertake the present course of study and complete it successfully.

On the onset, I would like to thank Dr. M. Ponnavaikko, Provost (SRM University) for being my guide through the course of this research and for motivating me to pursue my studies in India. Without his support and blessings, I wouldn’t have even started. I also wish to thank our Chancellor, Thiru. T. R. Pachamuthu and our Vice Chancellor, Thiru. P. Satyanarayanan for their constant support; trust and encouragement which has helped me complete this work. I would also like to thank our Director (Research), Dr. D. Narayana Rao who has constantly provided me with advice neutrally.

I would also like express my immense gratitude to my beloved Center Incharge, Mr. C. Gopalakrishnan without whose moral support, technical guidance and encouragement, it would have neigh impossible for me to venture on this exploration of advanced technologies. His guidance paved way for me to complete this research in a successful manner, overcoming all difficulties. I am also deeply indebted to my colleagues at the Nanotechnology Research Center, for their technical help and for the nutrition they provided to both my brains and my body. I owe a special note of gratitude, to Mr. K. R. Ganesh, a colleague who has been more of a brother. Without his advice, help and intense technical fights, this work would not have been feasible. I would also like to thank my friends and most of all my family for their unflinching support during the course of this research.
