ACKNOWLEDGEMENTS

Research work leading to a doctoral degree is a well planned academic exercise which couples intellectual pursuit with social commitment. Any research work which involves studies on ‘Recycling’ is intellectually challenging and has ample social commitment attached to it.

To imagine doing a research work in a subject like ship recycling is not difficult, but to contemplate on developing ideas and implement them in a structured academic pattern is quite cumbersome. Accomplishing the research mission in this case demands manifestation of able and sustainable guidance. Here, I should say I was very lucky to have Dr. C G Nandakumar, Reader, Department of Ship Technology as my research guide.

Dr Nandakumar who intervened at a critical juncture of research career and offered me his full support by including me as one of his research students and this goodwill gesture boosted my confidence level enabling me to sustain my efforts. His unique method of motivation clicked on me very well and I was benefited by that throughout my research work. If anybody finds this thesis as collection and compilation of well structured facts and ideas, it is the reflection of prompt guidance given by Dr Nandakumar (if somebody feels otherwise, it merely reflects my style of placing things in black and white). I express my sincere and whole hearted gratitude towards Dr Nandakumar for his guidance and active support during the conduct of my research work.

I express my gratitude to Dr K P Narayanan, Head, Department of Ship Technology for his support that helped me to overcome some of the administrative problems in the research work. A very special word of gratitude to Dr. Dileep Krishnan, Reader, Department of Ship Technology, (under whom I initiated my research programme) for providing me right motivation and inspiration throughout my research study. I express my thanks to Dr Sudheer C. B Lecturer, Department of Ship Technology for providing me valuable tips regarding some of my research areas.

I express my sincere thanks to Jayaram S and Rajesh R. who worked with me as research associates with me in a similar research project, for their active help in collection and compilation of facts and figures regarding ship recycling activities and
generation of computer graphics for the thesis. Praveen Viswanath a former student of mine and presently working in Swire Pacific Offshore, Singapore has been rendering invaluable support to me in updating the latest developments in marine technology. I hereby acknowledge my sincere gratitude to him.

I am also thankful to my former undergraduate students, Sanal B Nair, Rajesh Panicker (Surveyors, DNV), Thomas Mathew, Vineeth N( Cochin Shipyard Ltd), Vineeth ( Pipavav Shipyard) and Pramod K.P for their whole hearted help rendered during my research work. Very special thanks to P G Sunil Kumar (Commander, Indian Navy) a fellow research scholar in the department, for the constant motivational support that he rendered in all my academic pursuits and especially in the initial stages of my research work. Dr. Abdul Rahim, Assistant Regional Manager, Class NK, London has been providing continuous support during my research work. I offer my thanks to Dr. Rahim for his encouraging words and deeds.

Abymol who was working with me as a research assistant in one of the research programmes helped me in type setting and formatting the wildly written manuscripts by me. I express my sincere thanks to Abymol for her patient and prompt assistance.

Class NK, Mumbai office was graceful in funding a related consultancy research project investigated by me. I am very much grateful to them for their kind gesture in this regard.

I am thankful to all other faculty members, technical and library staff and members of administrative staff of the department for the help and support rendered by them during my research work.

I will be doing injustice if I do not acknowledge my beloved wife Salini and children, Namadev and Manavedan who were always enthusiastic over my research work and were sometimes eagerly waiting for the completion of the project.
