LIST OF TABLES

CHAPTER ONE
Table — 1.1: The Function Of Various Components in Electroless Plating ..........6
Table — 1.2: Typical Electroless plating bath with Hypophosphite reducing agent ....9
Table — 1.3: Typical Electroless plating bath with Hydrazine reducing agent ....10
Table — 1.4: Complexing agent used in various Electroless plating baths ..........14
Table — 1.5: Complexing agent used in various Electroless plating baths, with Hydrazine as reducing agent ................................................................. 15
Table —1.6: Various applications of Electroless Nickel .....................................20

CHAPTER TWO
Table —2.1: Composition of the aqueous Zincating solutions used in the pre — plate treatment of the aluminium substrate ............................................. 40
Table —2.2: Pre-plate processing scheme for Al substrate used in the present investigation .......................................................... 41
Table -2.3: Pre plate processing scheme for Cu substrate used in the present investigation ......................................................................................... 43
Table -2.4: Chemicals used as essential agents in this investigation .................44
Table -2.5: Selected Composition of EN plating bath solutions .......................46

CHAPTER : 3
Table -3.1: Variation of the thickness, the rate and quality of deposition with concentration of Nickel ions at 348K .................................................62
Table -3.2: Effect of the bath constituents on the rate of deposition at various temperature ......................................................................................... 64
Table -3.3: Effect of the bath constituents on the nature of coating and the bath Stability .............................................................. 65
Table - 3.4: Effect of the Temperature and the pH on EN Plating ....................67
Table - 3.5 : Effect of the pH on the thickness and rate of deposition in EN plating at 328K

Table - 3.6 : Effect of the concentration of zincating ZNCT-4 solution on the thickness and rate of deposition

Table - 3.7 : Effect of the Zincating time on the thickness and rate of deposition

Table -3.8 : Effect of various alkaline pH adjusters on the thickness and quality of deposition

Table -3.9 : Effect of the pH on the thickness and rate of deposition at 333K

Table -3.10 : Effect of the pH on the thickness and rate of deposition at 338K

Table -3.11: Effect of the pH on the thickness and rate of deposition at 343K

Table -3.12: Effect of the pH on the thickness and rate of deposition at 348K

Table -3.13: Effect of the pH on the thickness and rate of deposition at 353K

Table -3.14: Effect of the pH and the temperature on the thickness, rate of deposition and stability of bath

Table-3.15: Variation of the pH of the EN bath with time

Table-3.16: Effect of the pH on the thickness and rate of deposition at 328K with 0.02M Ni^{2+} ions

Table -3.17: Effect of the pH on the thickness and rate of deposition at 333K

Table -3.18: Effect of the pH on the thickness and rate of deposition at 338K

Table -3.19: Effect of the pH on the thickness and rate of deposition at 343K

Table -3.20: Effect of the pH on the thickness and rate of deposition at 348K

Table -3.21: Effect of the pH on the thickness and rate of deposition at 353K

Table -3.22: Effect of the pH and the temperature on the thickness and rate of deposition with 0.02M Ni^{2+} bath

Table-3.23: The Rate of deposition and the thickness as a function of time

Table-3.24: Effect of the additives on the thickness and quality of deposition

Table-3.25: d-values of EN coated Aluminium and Copper plates
## CHAPTER FOUR:

Table 4.1: Corrosion data of EN plated panels at various temperatures in 3.5 % NaCl

Table 4.2: Corrosion data of EN plated panels at various pH in 3.5 % NaCl

Table 4.3: Corrosion data of EN plated panels at various Concentration of Ni \( \text{II} \) in 3.5 % NaCl

Table 4.4: Corrosion data of EN plated panels at various Zincating type in 3.5 % NaCl

Table 4.5: Corrosion data of EN plated panels with different pH adjusters, in 3.5 % NaCl

Table 4.6: Corrosion data of EN plated Aluminum panels in various Environment by potentiodynamic method

Table 4.7: Corrosion data of EN plated Copper panels in various Environment by potentiodynamic method

Table 4.8: Corrosion data of EN plated Aluminium panels in various Environment by Weight loss method

## CHAPTER FIVE

Table 5.1: Summary of Corrosion rates of coated plates
