## CHAPTER 1: INTRODUCTION

### Physical Activity

- Why is there a need to study physical activity? 3
- Benefits of activity - pathways of interests 4
- How much physical activity is needed? 5
- How much are we doing? 5
- What are the factors that affect activity pattern? 6
- How is physical activity measured in populations? 6
- Need of the day 7
- Future research prospective of physical activity (PA) in the domain of public health 8
- Yoga appraised as physical activity 8

### Metabolic Syndrome (MS)

- Factors affecting metabolic syndrome 14
- Prevalence of MS in developing countries and among Asian Indians 15
- Sedentary behaviour and metabolic syndrome 17

### Physical Activity and Metabolic Syndrome

- Physical Activity and Obesity 22
- Physical Activity and Diabetes 25
- Physical Activity and Lipid Profile 27
- Physical Activity and Hypertension 28

### Pattern of physical activity and cardiovascular functions

### Significance of the study

### Objectives

1-31
CHAPTER 2: MATERIALS AND METHODS 32-58

- Map of field area 32
- About field area 33
- Population under study 33
- Subjects and techniques 34
- Distribution of the subjects 36
- Sample size (estimation) 37
- Duration of study 37
- Pilot survey 37
- Anthropometric and physiological measurements studied 39
- Statistical analysis 52
- Computer applications in statistical analysis 57
- Limitations of the study 58

CHAPTER 3: RESULTS 59-180

- Repeatability of various anthropometric and physiological variables 59
- Socio-demographic profile, lifestyle and health parameters of adult males and females 60
- Impact of different patterns of physical activities on various obesity and cardio respiratory markers among adult males and females 89
- Impact of different patterns of physical activities on various obesity and cardio respiratory markers among adult males and females in different follow up cohorts. 117
- Distribution of metabolic syndrome (MS) and its correlation with various anthropometric measurements among adult males and females 131
- Impact of different patterns of physical activity on symptoms of metabolic syndrome 144
- Impact of socioeconomic factors on pattern of physical activity and metabolic syndrome 149
- Effect of life style pattern on cardio vascular functions 163
- Coronary heart disease (CHD) risk of 10 years among adult males and females 166
- Association of obesity and its covariates with variants of uncoupling protein 1 168

CHAPTER 4: DISCUSSION 181-204

CHAPTER 5: SUMMARY AND CONCLUSION 205-217
