ACKNOWLEDGEMENTS

I have no words to express my feelings of gratitude to my supervisor Dr. SherAli, for his continuous encouragement, suggestions and ideas. His optimism and boundless enthusiasm turned scientific endeavour into a challenge. I am grateful to him for having initiated me into Molecular biology.

My thanks are also due to doctoral committee members for having provided useful suggestions and for critical evaluation of this work. A special thanks to Dr. Bhat for his help in doing the statistical analysis.

I would like to thank Director, NIL, Prof. Sandip K. Basu for his support.

Colleagues in the lab Gauri, Kumar, Dr. Shashi and 'LP' gave excellent assistance. Words are inadequate to reciprocate the support of Khem Singh-ji without which this work would have been incomplete. A word of thanks for my friends in RSH and the '92 batch.

I would like to especially acknowledge the love and support given by Mrs. Lalita and her family.

A special thanks to Mr. A. K. Aggarwal, deputy registrar and Mr. Girish for all the help rendered during the past three years. To Babulal for the xeroxing, to Satish for binding and to all the people in the stores and administration for their invaluable help.

My sincere thanks are also due to Dr. N.M Aleyas, Mr. Muraleedharan Dr. B. Yadav, Dr. Sasikanth, and Dr. Sundararaman for arranging the samples for the study.

The financial support from Counsil of Scientific and Industrial Research (CSIR) in the form of fellowship is gratefully acknowledged.

I do not have appropriate words to express my sincere thanks to Joe for his moral and professional support during the final stages of preparation of this thesis.

Finally I would like to thank my parents, brothers and sister, without whom I would never have come this far. Their prayers, love, support and encouragement made this possible in such a short time.
