LIST OF TABLES

Table 1: Metabolic actions of Insulin

Table 2: Development of Insulin resistance

Table 3: Stages as defined by the criteria given by the Mayo clinic

Table 4: Descriptors of different kinds of neuropathic pain

Table 5: Monofilament table

Table 6: Classification of exercise intensity, based on exercise lasting up to 60 minutes

Table 7: Characteristics of important studies in the management of diabetic peripheral neuropathy

Table 8: Values for latency, duration and amplitude and conduction velocity for distal peroneal nerve among healthy adults

Table 9: Values for latency, duration and amplitude and conduction velocity for sural nerve among healthy adults

Table 10: Mean and standard deviation for duration of diabetes, smoking and alcoholism in the control and the study groups

Table 11: Distribution of co-morbidities in the control and study groups

Table 12: Duration of Insulin and medications in the control and the study groups
Table 13: Mean and standard deviation for dosage of insulin and drugs at baseline and 8th week in the control and the study groups

Table 14: Mean and Standard deviation for anthropometrics measures at baseline and 8th week in the control and the study groups

Table 15: A gender based comparison of waist to hip ratio in the control and the study groups

Table 16: Mean and standard deviation of glycosylated hemoglobin, fasting blood sugar and post-prandial sugar in the control and the study groups at baseline and 8th week

Table 17: Mean and standard deviation for MDNS in the control and the study groups at baseline and 8th week

Table 18: Mean and standard deviation for peroneal nerve at ankle at baseline and 8th week for the control and the study group

Table 19: Mean and standard deviation for parameters of knee segment of peroneal nerve at baseline and 8th week for the control and study groups

Table 20: Mean and standard deviation for parameters of sensory sural nerve in the control and the study groups at baseline and 8th week

Table 21: Quality of life scores of patients with neuropathy, Pre and Post in the control and the study groups

Table 22: Shows correlation of duration of diabetes with various other variables

Table 23: Shows correlation of neuropathy quality of life with other variables
Table 24: Shows correlation of HbA1c and nerve velocities
