Acknowledgements ................................. i  
List of figures and tables ........................ iii 
Abbreviation ...................................... v  
Abstract of the dissertation ...................... vii  

1. **Introduction** ................................ 1  
   1.1. Definition .................................. 1  
   1.2. Signs and symptoms of Alzheimer’s disease .......... 1  
   1.3. Risk factors of Alzheimer’s disease ................. 1  
   1.4. Prevalence of Alzheimer’s disease .................. 2  
   1.5. Pathophysiology of Alzheimer’s disease ............ 3  
   1.5.1. Plaque formation .......................... 3  
   1.5.2. Neurofibrillary tangles ...................... 4  
   1.5.3. Inflammation ............................. 5  
   1.6. Treatment of Alzheimer’s disease ................. 8  
   1.6.1. Pharmacological therapy .................... 8  
   1.6.2. Non-pharmacological therapy ................. 11  
   1.7. Role of herbal medicine in the treatment of Alzheimer’s disease .......... 16  
   1.8. Rationale of the present study .................. 21  

2. **Literature review** ......................... 25  
   2.1. Review on animal model used in the present study ...... 25  
   2.2. Review on relation between Type 2 Diabetes and Alzheimer’s disease .... 28  
   2.3. Review on role of glucagon-like peptide-1 and dipeptidyl peptidase-4 in Alzheimer’s disease ................. 30  
   2.4. Review on phytochemistry and pharmacology of plants used in the present study ......................... 32  

3. **Plant profile** ............................ 35  
   3.1. *Pterocarpus marsupium* Roxb. ............................ 35  
   3.2. *Eugenia jambolana* Lam. .......................... 36  
   3.3. *Gymnema sylvestre* R.Br. ......................... 37  

4. **Scope and objectives** ................... 39  
   4.1. Scope ........................................ 39  
   4.2. Objectives ................................... 40
5. Experimentation

5.1. Chemicals and reagents

5.2. Extracts and standardization

5.3. In vitro evaluation

5.3.1. Dipeptidyl peptidase-4 inhibition assay

5.3.2. Dissociation kinetics of dipeptidyl peptidase-4

5.4. Molecular docking studies

5.5. In vivo evaluation

5.5.1. Animals

5.5.2. Experimental induction of Alzheimer’s disease

5.5.3. Behavioral studies

5.5.3.1. Radial arm maze task

5.5.3.2. Hole-board task

5.5.4. Biochemical studies

5.5.4.1. Estimation of hippocampal active glucagon-like peptide-1

5.5.4.2. Estimation of hippocampal amyloid 42 levels

5.5.4.3. Estimation of hippocampal total tau and phosphorylated tau

5.5.4.4. Estimation of hippocampal tumor necrosis factor-α and interleukin-1β levels

5.5.5. Histology of hippocampus

5.5.6. Statistical analysis

6. Results

6.1. In vitro evaluation

6.2. In silico evaluation

6.3. Behavioral analysis

6.3.1. Effect of P. marsupium and E. jambolana on the radial arm maze task

6.3.2. Effect of P. marsupium and E. jambolana on the hole-board task

6.4. Biochemical analysis

6.4.1. Effect of P. marsupium and E. jambolana on active glucagon-like peptide-1 levels

6.4.2. Effect of P. marsupium and E. jambolana on amyloid 42 levels

6.4.3. Effect of P. marsupium and E. jambolana on total tau and phosphorylated tau levels
6.4.4. Effect of *P. marsupium* and *E. jambolana* on tumor necrosis factor-α and interleukin-1β levels

6.5. Histology of neuronal count

7. Discussion

7.1. *In vitro* evaluation

7.2. Molecular docking

7.3. *In vivo* evaluation

8. Conclusion

9. Future directions

10. References

11. Annexure I - CSIR senior research fellowship award letter.

12. Annexure II - Publications

13. Annexure III - Conferences attended

14. Annexure IV - Animal ethical approval

15. Annexure V - Certificate of analysis of extracts
