## LIST OF TABLES

Table 2.1  GDP growth rate of India (1980-2007)

Table 2.2  Dependency of economy of various states of India

Table 2.3  Electricity access in 2005 by South Asian countries

Table 2.4  Contribution of different sectors to the GDP

Table 2.5  Power generation using various fuels in the world

Table 2.6  Renewable energy sources theoretical potential

Table 2.7  Annexed Countries to Kyoto protocol

Table 2.8  Money pledged in Copenhagen meet by developed countries

Table 2.9  Motor vehicles per thousand people

Table 2.10  Power consumption per capita

Table 2.11  Power generation by different sectors in India

Table 2.12  World oil consumption (1980-2006)

Table 2.13  World Gas Consumption (1980-2006)

Table 2.14  Solar energy flow

Table 2.15  Different methods of solar energy usage in the Earth

Table 2.16  Energy consumption in 2005 for South Asian Countries

Table 2.17  Trend of energy consumption in different sectors

Table 2.18  Efficiency of parts of thermal power plants
Table 3.1 Money pledged in Copenhagen meet (2009)

Table 3.2 Number of registered CDM Projects in India (2008)

Table 3.3 Projects sanctioned to different sectors in India (2008)

Table 3.4 Social benefits of different CDM projects

Table 3.5 Appropriate criteria of selecting technology

Table 4.1 MNRE Annual Report, GoI

Table 5.1 Sales of battery operated vehicles since 2008 in Lucknow

Table 5.2 Techno economic analysis of BOV and motor cycle for different Distances of travel

Table 5.3 Choice of two wheelers in rural areas of Lucknow

Table 5.4 Choice of two wheelers in urban and rural areas of Lucknow

Table 5.5 SHLS in villages of Barabanki (2008-2010)

Table 6.1 Comparison of parameters of Bass model using renewable energy sources for power generation in India

Table 6.2 Wind power potential of India using Bass model up to 2020

Table 6.3 Small hydro power potential of India using Bass model up to 2020

Table 6.4 Biomass power potential of India using Bass model up to 2020

Table 6.5 Cogeneration (bagasse) potential of India using Bass model up to 2020
Table 6.6 Wind power potential of India using Pearl model up to 2020
Table 6.7 Small hydro power potential of India using Pearl model up to 2020
Table 6.8 Biomass based power potential in India using Pearl model up to 2020
Table 6.9 Cogeneration (bagasse) power potential of India using Pearl model up to 2020
Table 6.10 Wind power potential of India using Logistic model up to 2020
Table 6.11 Small hydro potential of India using Logistic model up to 2020
Table 6.12 Biomass potential of India using Logistic model up to 2020
Table 6.13 Cogeneration (bagasse) potential of India using Logistic model up to 2020
Table 6.14 Model verification using correlation coefficients of different forecasting models used for renewable energy based power generation forecasted up to 2020
Table 6.15 Expected average rate of rise of different renewable energy based power generation in India since 2011
Table 6.16 Comparison of average rate of rise of power generated from Renewables(2007-2009)
Table 6.17 Average rate of rise per year of power generation in India from
different renewable sources as determined from different models

Table 6.18 Coal and oil consumption for power generation in India during period (1981-2004)

Table 6.19 Green house gases mitigation potential in India using renewable energy sources by 2020
