LIMITATIONS AND DELIMITATIONS OF THE STUDY

Education and Satellite Broadcasting is a vast subject of study. It has many components which are difficult to study in depth. The study tries to confine itself to Development Education.

The study has brought to the forefront that most of the developed and developing countries have realized the enormous potential of using satellites for education and thereby for the socio-economic development of the country.

The study relates to the developing and developed nations. Since there are a large number of countries in the world it was difficult to make a very correct choice. However major countries of the developed and developing nations were selected. Developed nations have the technological expertise to overcome specific communication barriers. Developing nations with priority for socio-economic development make use of technology thus removing hurdles of illiteracy, superstition and poverty.

The topic of the study being extensive, it was extremely difficult to get adequate data from the sources. At times the data was blocked. Despite all odds extensive efforts were made to obtain the relevant material and data.
