Preface                                        i
Acknowledgements                           iv

Chapter 1

Preliminaries

1. Fundamental concepts in Graph Theory     1
2. Fundamental concepts in Matroid Theory   5
3. Historical Developments and Overview     14

Chapter 2

Splitting Off Operation for Graphs and its Applications

1. Introduction                               17
2. Cycles in $G_{xy}$                         19
3. Spanning trees in $G_{xy}$                 21
4. Bipartiteness of $G_{xy}$                 27
5. Applications - Splitting off operation and the connectedness 28
Chapter 3

Splitting Off Operation for Binary Matroids and its Applications

1. Splitting off operation in binary matroids 33
2. The bases, the rank function and the closure operator of $M_{xy}$ 37
3. Applications 46

Chapter 4

Excluded-Minors for Cographic Splitting Off Matroids and Splitting Matroids

1. Introduction 53
2. The splitting operation and minors 56
3. The splitting of cographic matroids 59
4. The splitting off operation on graphic and cographic matroids 84
Chapter 5
Forbidden-Minor for the Class of Graphic Element Splitting Matroids

1. Introduction 86
2. The element splitting operation and its properties 89
3. The element splitting operation on graphic matroids 95

Chapter 6
Excluded-Minors for Cographic Element Splitting Matroids

1. Introduction 106
2. The element splitting operation and minors 107
3. The element splitting operation on cographic matroid 109

Chapter 7
Forbidden-Minors for Graphic and Cographic es-Splitting Matroids

1. Introduction 123
2. The es-Splitting operation and its properties 126
