List of Tables

Chapter -I

1.1 Most Heavy Metal Polluted sites in India
1.2 Marked Tributyltin effected areas in the world
1.3 Heavy metal binding microbial exopolysaccharides

Chapter II

2.1 Physico-chemical characteristics of environmental samples from various (marine and estuarine) habitats of Goa region.
2.2 Total viable counts of selected bacterial isolates from marine and estuarine water samples collected from various habitats of Goa.
2.3 Biochemical Characteristics of selected Luminous bacterial isolates
2.4 Morphological and colony characteristics of potential heavy metal resistant marine and estuarine luminous bacterial isolates on GBMA

Chapter -III

3.1. Growth
3.1.1. Screening of metal and organo-metal resistant luminous bacteria
3.1.2. Heavy metal sensitivity of luminous bacterial isolates VB6, VB9, VB23 and DN1W
3.1.3. (MIC values) of broad range antibiotics in MSM Broth + 2%NaCl +0.2%Glucose
3.1.3. Antibiotic Sensitivity of various Luminous isolates from Marine and Estuarine habitats of Goa
3.2 Bioluminescence
3.2.1. Relative light intensities of Vibrio harveyi strain VB23 in presence of heavy metals Hg^{2+} and Cd^{2+}
3.2.2. Relative light intensities of Vibrio harveyi strain VB23 in presence of heavy metal Hg^{2+} and Chelating agent
3.2.3. Relative light intensities of Vibrio harveyi strain VB23 in presence of heavy metals Sn (II), As (III) and As (V).
3.2.4. Relative light intensities of Vibrio harveyi strain VB23 in presence of Organo-metals (TBT and DBT)
3.2.5. Relative light intensities of *Vibrio harveyi* strain VB23 in presence of antibiotics

3.2.6. Relative light intensities of *Vibrio harveyi* strain VB23 in presence of antibiotics & heavy metal Hg$^{2+}$

3.2.7. Relative light intensities of *Vibrio harveyi* strain VB23 in presence of Chemical mutagens (AcOr, EthBr, NTG)

3.2.8. Relative light intensities of *Vibrio harveyi* strain VB23 in presence of Chemical mutagens (Sodium Azide and 5-Bromouracil)

3.2.9. Relative light intensities of *Vibrio harveyi* strain VB23 irradiated by UV light

3.2.10. Relative light intensities of *Vibrio harveyi* strain VB23 in presence of antibiotics and UV exposure

3.2.11. Relative light intensities of *Vibrio harveyi* strain VB23 in presence of n-Decanal

3.2.12. Growth and Luminescence of *Vibrio harveyi* VB23 in the presence of heavy metals and organo-metals

3.4. Exopolysaccharides

3.4.1 Chemical composition of exopolymer (µg/mg) isolated from luminous *Vibrio harveyi* VB23 in comparison to other bacterial isolates

3.4.2 Emulsifying activity of the exopolymer VB23

3.4.3 FTIR – functional groups of the exopolymer VB23

3.5. Pigment studies

3.5.1 Extraction of luminous bacterial stress pigments by different organic solvents

**Chapter IV**

4.1. MIC values of transformants in for heavy metals and organometals (mM)

4.2. Transformation ability of *E. coli* DH5α for different plasmids on LB+ Ampicillin (25 µg/ml)

4.3. Confirmation of presence of genetic determinants for resistance to heavy metals

4.4. Confirmation of presence of genetic determinants for resistance to antibiotics

4.5. Effect of Chemical mutagens growth and Luminescence of *Vibrio harveyi* strain VB23
