CONTENTS

PREFACE

CHAPTER - I

INTRODUCTION

1.1 Classification of Estuaries

1.1.1 Classification by freshwater inflow and evaporation.

1.1.2 Classification in terms of Geomorphological Structure.

1.1.3 Classification by stratification and circulation.

1.1.3.1 Salt wedge estuary.

1.1.3.2 Partially mixed estuaries.

a) Two layer flow with entrainment.

b) Two layer flow with vertical mixing.

1.1.3.3 Well mixed or vertically homogeneous estuary.

a) With lateral variation.

b) Laterally homogeneous.

1.2 Factors affecting the estuarine system.

1.2.1 Tides.

1.2.2 Salinity.

1.2.3 Temperature.

1.2.4 Currents.

1.2.5 Suspended sediments.

1.3 Study of Physical aspects in estuaries.

1.4 Studies conducted in different estuarine systems.

1.4.1 Studies conducted in Indian estuaries.
1.4.2 Earlier studies in the Beypore estuary. .......... 14
1.5. Literature review. .................................. 15
1.6. Description of the study area. ..................... 22
1.7. Scope of the work. .................................. 23

CHAPTER - II
MATERIALS AND METHODS
2.1 Procedure of synoptic field observation. .......... 26
2.1.1 Current measurements. .............................. 27
2.1.2 Temperature and salinity. ......................... 27
2.1.3 Suspended sediment concentration. ............... 28
2.1.4 Area of cross sections. ............................ 28
2.1.5 Tide measurements. ................................ 29
2.1.6 River discharge. .................................. 29
2.2 Processing the hydrographic data. .................. 29
2.3 Estimation of suspended sediment fluxes. .......... 31

CHAPTER - III
GENERAL HYDROGRAPHY
3.1 Temperature distribution. ............................ 33
3.2 Salinity distribution. ................................ 35
3.3 Seasonal and longitudinal variation of tidal mean salinity during flood and ebb tidal phases. .......... 42
3.4 Residual currents and salinity. ..................... 43
3.5 Monthly variation of River discharge, Rainfall and Mean wind speed. .......................... 47
CHAPTER - IV
RESIDUAL FLUXES OF SALT AND WATER

4.1 Annual variation of Eulerian residual currents and Stokes drift. ----- 49
4.2 The fluxes of salt. ----- 53
4.3 Estuarine classification. ----- 55

CHAPTER - V
EDDY DIFFUSIVITY, FLUSHING TIME AND STUDIES ON MIXING BY RICHARDSON'S NUMBER.

Introduction.

5.1 Coefficient of eddy diffusivity, freshwater fraction and flushing time. ----- 60
5.1.1 Theory and assumptions. ----- 60
5.1.2 Computation of longitudinal coefficient of eddy diffusivity and flushing time. ----- 61
5.1.3 Annual variation of longitudinal coefficient of eddy diffusivity and flushing time. ----- 63
5.2 Mixing processes and circulation. ----- 65
5.2.1 Richardson's number. ----- 66
5.2 Surface salinity distribution modelling. ----- 69

CHAPTER - VI
DISTRIBUTION AND FLUX OF SUSPENDED SEDIMENT

Introduction

6.1 Longitudinal distribution of suspended sediment during flood and ebb tidal phases. ----- 76
6.2 Semidiurnal and seasonal variation of suspended sediment concentration. ----- 78
6.3 Annual variation of river flow and suspended sediment concentration. ----- 80
6.4 Flux of suspended sediment. ----- 81
