## Contents

1 **Prologue**
   1.1 Preamble 1
   1.2 Precision Agriculture: An Overview 2
      1.2.1 Soil to Crop Mapping 4
      1.2.2 Disease Mapping 4
      1.2.3 Weed Mapping 4
      1.2.4 Selective Harvesting 5
      1.2.5 Grading 5
   1.3 Case Study of Tobacco crop 5
   1.4 Related Works 9
      1.4.1 Models for Disease Mapping 9
      1.4.2 Models for Selective Harvesting 10
      1.4.3 Models for Grading 11
   1.5 Objectives 13
   1.6 Performance Measures 13
   1.7 Outline of the Thesis 16

2 **Dataset**
   2.1 Preamble 18
   2.2 Seedling Disease Dataset 18
   2.3 Tobacco Harvesting Dataset 21
   2.4 Tobacco Grading Dataset 24
   2.5 Conclusion 25

3 **Classification of Tobacco Seedling Diseases**
   3.1 Preamble 30
   3.2 Proposed Model 31
      3.2.1 Lesion Area Segmentation 31
      3.2.2 Feature Extraction 34
3.2.2 First Order Statistical Texture Features: An Overview

3.2.2.1 GLCM Features: An Overview

3.2.3 Classification

3.3 Experimentation

3.3.1 Segmentation Performance Results

3.3.2 Classification Results

3.4 Conclusion

4 Classification of Tobacco Leaves

4.1 Preamble

4.2 Filter Based Proposed Model

4.2.1 Leaf Segmentation

4.2.2 Detection of Maturity Spots

4.2.3 Estimation of Degree of Ripeness

4.2.4 Classification

4.2.5 Experimentation

4.2.6 Summary

4.3 Texture Based Proposed Model

4.3.1 Feature Extraction

4.3.1.1 Local Binary Pattern (LBP)

4.3.1.2 Local Binary Pattern Variance (LBPV)

4.3.1.3 Gray Level Local Texture Pattern (GLTP)

4.3.1.4 Gabor Filter Response (GFR)

4.3.1.5 Wavelet Decomposition (WD)

4.3.2 Feature Level Fusion

4.3.3 Feature Selection

4.3.4 Classification

4.3.5 Experimentation
