LIST OF TABLES

3.1 Test efficiency of BBN for diagnosing psychosomatic disorder diseases ..................................................... 81
3.2 Test efficiency of BBN for diagnosing gastrointestinal disorder diseases .......................................................... 83
4.1 Common characteristics of ANN model ................................................. 93
4.2 Performances of different BPNN models ............................................. 96
4.3 Test efficiency of BPNN for diagnosing psychosomatic disorder diseases ..................................................... 98
4.4 Different BPNN models for gastrointestinal data .................................. 99
4.5 Test efficiency of BPNN for diagnosing gastrointestinal disorder diseases ..................................................... 102
4.6 Results of BPNN for diagnosing psychosomatic disorders and gastrointestinal disorders ........................................ 102
5.1 k-means clustering algorithm .............................................................. 106
5.2 Performances of different means for diagnosing psychosomatic disorders ..................................................... 111
5.3 Results of RBFNN for diagnosing psychosomatic disorders using different means ........................................... 111
5.4 Test efficiency of RBFNN for diagnosing psychosomatic disorder diseases ..................................................... 112
5.5 Results of RBFNN for diagnosing gastrointestinal disorders using different means ........................................... 114
5.6 Test efficiency of RBFNN for diagnosing gastrointestinal disorder diseases ..................................................... 115
6.1 Test efficiency of DIAGNET for diagnosing psychosomatic disorder diseases ..................................................... 121
6.2 Test efficiency of DIAGNET for diagnosing gastrointestinal disorder diseases ..................................................... 126
6.3 Performances of different models ........................................................ 129
6.4 EER value of different models ........................................129

6.5 Results of different combination rules for diagnosing psychosomatic disorders... ........................................131

6.6 Results of different combination rules for diagnosing gastrointestinal disorders... ........................................131
