Acknowledgement

I am extremely grateful to my guide late Prof. Veronica Rodrigues in National Centre for Biological Sciences, Bangalore. She provided me the scientific platform and accepted me as a student to work under her guidance in NCBS. Her enthusiasm, commitment, remembering every detail of the experiments, reaching her whenever we are in need, made her a wonderful scientist and human being even when she was fighting with her cancer. I always respect her neatness and aesthetic sense in every tiny work, starting from the scientific experiment to organising meeting. After her death, her absence made us emotionally unstable. It took a bit of time when Prof. K VijayRaghavan came and gave us the immense support to overcome that crisis. He is another wonderful person, a good scientist as well as a nice person to work with. Whenever we went to him with some trouble with a gentle smile he always solved our problem. It was my honour that I get a chance to work with these two great personalities. I learned many things from them which helped me to build my own character or personality. Their exceptional nature of guidance makes them unforgettable in my whole life.

I want to specially thank Prof. Mani Ramaswami from Trinity College, Dublin, for being a great collaborator. It has always been a great experience to interact with him during our scientific discussion. After Prof. Veronica’s death he solely took care of us. Every week ‘Friday meeting’ he used to keep his precious time always free for us and discussion on our work progress. He always encouraged us to think from a bigger point of view which in my opinion is an important and crucial aspect, being in the scientific field. I am really grateful to him for his support and enthusiasm to build my future career in the next step.

I was lucky to work with a number of nice colleagues as collaborators who directly took part in the experiments in this work. Avni was the M. Sc student, from whom I first learned behavior assays using Y maze apparatus and our project started. Madhumala is a great colleague in the professional life and so well organised. Indulekha (our special child), Swati, Ankita and Pushki made our habituation team interesting and it was great fun to discuss science and to work with them. Rashi performed useful experiments and gave our project completely a new direction. I spent almost 5 months in Mani’s lab. During my stay I worked with Adrian, who
would never get tired to do two photon imaging with my habituated flies. He and other members of the lab, Cathal, Vimlesh, Cristina, Jens, Eimear, Aoife made my stay there interesting and joyful.

During my first few months of my Ph.D, I spent approximately a year in TIFR, Bombay. Champadi in DBS was a good friend and not less than a guide in many aspects. I thank to a number of seniors Ajeet, Dada, Keshav, Ridhhi in the lab. I am especially thankful to Ajeet as being a very good friend and always to be my side whenever I faced any problems. His jokes, shayaris were the constant source of entertainment. Dada was another wonderful person and not less than an actual brother to me. Dada and ajeet made me realized how an ideal senior should be. Somdatta, Neha, Rishita, Swadhin, Harinath, Aswin, Dhanno, Hari (The king) were other friends who created an exceptionally friendly environment in DBS. In NCBS Priankana (Yanki), Indu nair (indu bindu), Sandy, Sakku, Swetha and Sejal (cricket) were the laughing-out-loud group, whom I spent most of my wonderful time together. Guru, Rajesh, Aman, Ali, Krishnan, Uma, Venkat, Nagu, Ramveer, Tejas, Sonia, who constitutes a colourful and joyful generation in the lab.

The most important thanks to my family: my parents (ma and baba), my sister (didibhai) and my best friend and husband Saikat, for their constant support, love and understanding. I am really grateful to Saikat for encouraging me to start my career as a research scientist. In every moment, starting from the scientific or professional problem to emotional problem, whenever I faced a slight trouble he always helped me to get over it with his laughing jokes and his mature decisions.
