LIST OF TABLES

Table 3.1: Composition of various grades of steel (wt. %). ............................................................ 61
Table 3.2: Summary of etchants used in the present study............................................................. 78
Table 3.3: Determination of lattice structure..................................................................................... 88
Table 4.1: Results of tensile tests conducted on various steel grades in green state................... 93
Table 4.2: Determination of lattice strain in SAE8620 steel specimens through X-ray diffraction ................................................................. 102
Table 4.3: Results of fatigue tests conducted on specimens made of SAE8620 steel in green state ......................................................................................... 104
Table 4.4: Results of fatigue tests conducted on case-carburized and tempered (uncoated) specimens made of SAE8620 steel ......................................................................... 104
Table 4.5: Results of fatigue tests conducted on case-carburized, tempered and WC/C coated specimens made of SAE8620 steel .................................................................. 104
Table 4.6: Values of parameters in the linear model for fatigue life of SAE8620 steel.................. 105
Table 4.7: Results of staircase tests conducted on specimens made of SAE8620 steel .............. 106
Table 4.8: Results of Dixon-Mood statistical analysis of staircase test data obtained for SAE8620 steel specimens ......................................................................................... 106
Table 4.9: Effect of case carburization and subsequent WC/C coating on the fatigue strength of SAE8620 steel ......................................................................................... 108
Table 4.10: Determination of lattice strain in 20MnCr5 steel specimens through X-ray diffraction .......................................................................................................................... 129
Table 4.11: Results of fatigue tests conducted on specimens made of 20MnCr5 steel in green state .......................................................................................................................... 130
Table 4.12: Results of fatigue tests conducted on case-carburized and tempered (uncoated) specimens made of 20MnCr5 steel .............................................................. 130
Table 4.13: Results of fatigue tests conducted on case-carburized, tempered and WC/C coated specimens made of 20MnCr5 steel .................................................................. 130
Table 4.14: Values of parameters in the linear model for fatigue life of 20MnCr5 steel .............. 131
Table 4.15: Results of staircase tests conducted on specimens made of 20MnCr5 steel ............. 132
Table 4.16: Results of Dixon-Mood statistical analysis of staircase test data obtained for 20MnCr5 steel specimens ......................................................................................... 133
Table 4.17: Results of quantitative EDAX elemental analysis.............................................................. 144
Table 4.18: Determination of lattice strain and associated residual stresses at various depths in case carburized specimens made of 20MnCr5 steel ........................................ 145
Table 4.19: Determination of lattice strain in EN353 steel specimens through X-ray diffraction .......................................................................................................................... 155
Table 4.20: Results of fatigue tests conducted on specimens made of EN353 steel specimens in green state ................................................................................................. 156
Table 4.21: Results of fatigue tests conducted on case-carburized and tempered (uncoated) specimens made of EN353 steel............................................................... 156

Table 4.22: Results of fatigue tests conducted on case-carburized, tempered and WC/C coated specimens made of EN353 steel............................................................... 157

Table 4.23: Values of parameters in the linear model for fatigue life of EN353 steel........ 157

Table 4.24: Results of staircase tests conducted on specimens made of EN353 steel........ 157

Table 4.25: Results of Dixon-Mood statistical analysis of staircase test data obtained for EN353 steel specimens................................................................. 158

Table 4.26: Effect of case carburization and subsequent WC/C coating on the fatigue strength of EN353 steel................................................................. 159

Table 4.27: Determination of lattice strain in SCM420 steel specimens through X-ray diffraction ................................................................. 170

Table 4.28: Results of fatigue tests conducted on specimens made of SCM420 steel in green state................................................................................................................ 171

Table 4.29: Results of fatigue tests conducted on case-carburized (uncoated) specimens made of SCM420 steel ................................................................. 172

Table 4.30: Results of fatigue tests conducted on case-carburized, tempered and WC/C coated specimens made of SCM420 steel................................................................. 172

Table 4.31: Values of parameters in the linear model for fatigue life of SCM420 steel........ 172

Table 4.32: Results of staircase tests conducted on specimens made of SCM420 steel........ 173

Table 4.33: Results of Dixon-Mood statistical analysis of staircase test data obtained for SCM420 steel specimens................................................................. 174

Table 4.34: Effect of case carburization and subsequent WC/C coating on the fatigue strength of SCM420 steel................................................................. 176

Table D.1: Technical specifications of Celestron Digital Microscope............................... 198

Table D.2: Technical specifications of Metallurgical Microscope................................. 198

Table D.3: Technical specifications of PANalytical X-Ray Diffraction Machine............ 199
