LIST OF TABLES

Table 1.1: Shows the mechanism of action of different plant compounds on various skin cancer cells.

Table 2.1: Molecular mechanisms involved in chemopreventive activity of some natural products against skin carcinogenesis.

Table 3.1: Data shows the details of compounds used for the study.

Table 3.2: Data shows the DMSO solubility for the compounds.

Table 3.3: Concentration of stock solutions.

Table 3.4: Data showing the details of primers for caspase-14.

Table 3.5: Data showing the details of primers for human involucrin.

Table 4.1: Data showing OD values obtained for the compounds by DPPH and FRAP assay.

Table 4.2: Data expressing the IC$_{50}$ values for the compounds in both HaCaT and A375 cells.

Table 4.3: Data showing OD values obtained for the compounds by XTT assay.

Table 4.4: Data showing the ability of the compounds to arrest the cell cycle at different phases in HaCaT and A375 cells.

Table 4.5: Data displaying the quantitative measurement of caspase-14 protein expression levels in HaCaT cells by each compounds.
Table 4.6: Data displaying the quantitative measurement of caspase-14 protein expression levels in A375 cells by each compounds.

Table 4.7: Data showing the purity of isolated RNA using GeneiPure™ kit.
