List of Tables

3.1 Performance comparison for simulated data .................. 65
3.2 ARIMA(9, 0, 0) model parameters .......................... 68
3.3 ARIMA(10, 0, 0) model parameters ......................... 69
3.4 Performance comparison for sunspot data ................... 69
3.5 ARIMA(1, 0, 1) model parameters .......................... 74
3.6 ARIMA(1, 1, 1) model parameters .......................... 74
3.7 Performance comparison for electricity price data .......... 74
3.8 Performance comparison for L&T stock time series data .. 78
3.9 ARIMA(3, 2, 0) model parameters .......................... 79
4.1 ARIMA(2, 0, 5) model parameters .......................... 88
4.2 ARIMA(10, 2, 0) model parameters ........................ 88
4.3 Performance comparison for internet traffic TSD sampled
every 30 minutes .................................................. 89
4.4 ARIMA(1, 0, 1) model parameters .......................... 93
4.5 ARIMA(8, 1, 0) model parameters .......................... 93
4.6 Performance comparison for TSD2 ............................ 93
5.1 Performance measures of SBI close Price data .............. 118
5.2 Performance measures of Number of Trades data of Tata
              Steel ...................................................... 119
6.1 Performance measures for Global Temperature ............... 126
6.2 Performance measures of rainfall data ....................... 128
6.3 Stock variables ........................................... 133
6.4 Performance measures ................................. 139
# List of Figures

1.1 Linear TSD: Height of a child .............................. 5
1.2 Exponential TSD: Average global temperature data .... 5
1.3 Periodic TSD: Sunspots number every year ............. 6
1.4 Daily closing price of SBI stock TSD ..................... 6
1.5 Number of trades of Tata Steel TSD ..................... 7
1.6 Three-layer ANN architecture ............................ 19
1.7 Time Series decomposition using MA Filter ............. 25
1.8 Decomposed SBI close price TSD with $m = 5$ ........... 33
1.9 Decomposed SBI close price TSD with $m = 10$ .......... 33
1.10 Decomposed SBI close price TSD with $m = 20$ ........ 34
1.11 Wavelet Decomposition ................................. 34

3.1 Zhang’s hybrid ARIMA-ANN model ..................... 54
3.2 Khashei and Bijari’s hybrid ARIMA-ANN model ........ 54
3.3 Multiplicative hybrid ARIMA-ANN model ............... 54
3.4 MA filter based hybrid ARIMA-ANN model ............. 61
3.5 Simulated time series data ............................... 64
3.6 One-step-ahead predictions for simulated time series data 66
3.7 Three-step-ahead predictions for simulated data using various models ........................................... 67
3.8 Sunspot time series data ................................. 70
3.9 One-step-ahead predictions for sunspot data using various models ........................................... 71
3.10 Five-step-ahead predictions for sunspot data using various
models .......................................................... 72
3.11 Electricity price time series data .......................... 75
3.12 One-step-ahead predictions for electricity price data using
various models .................................................. 76
3.13 Five-step-ahead predictions for electricity price data using
various models .................................................. 77
3.14 L&T stock market time series data ...................... 80
3.15 One-step-ahead predictions for financial data using vari-
ous models ...................................................... 81
3.16 Five-step-ahead predictions for financial data using vari-
ous models ...................................................... 82
4.1 Actual internet traffic TSD sampled at 30 minutes ....... 89
4.2 One-step ahead predictions for TSD1 .................... 90
4.3 Three-step ahead predictions for TSD1 .................. 91
4.4 Actual internet traffic TSD sampled at 60 minutes ....... 94
4.5 One-step ahead predictions for TSD2 .................... 95
4.6 Three-step ahead predictions for TSD2 .................. 96
5.1 A given TSD, returns TSD and conditional standard devia-
tion plots ......................................................... 101
5.2 A sample TSD and its VC plot ............................ 102
5.3 Typical plot of Normal, Platykurtic and Leptokurtic distri-
butions .......................................................... 103
5.4 A typical Q-Q plot for normal and non-normal TSD .... 104
5.5 Volatility characterization plots for number SBI close price data ........................................ 104
5.6 PI based hybrid ARIMA-GARCH model .......................................................... 109
5.7 MA filter length \( m = 35, k = 1.93 \) for series 1, \( k = 2.87 \) for series 2 ......................... 112
5.8 MA filter length \( m = 25, k = 1.97 \) for series 1, \( k = 2.99 \) for series 2 ......................... 113
5.9 Forecast results for SBI close price data ......................................................... 120
5.10 Forecast results for number of trades of Tata Steel .................................................. 121
6.1 Raw data and Trend-based ARIMA predicted data ............................................. 125
6.2 Forecast results for Average Global Temperature .................................................. 127
6.3 Forecast results for rainfall data ................................................................. 129
6.4 Adaptive filter model block ............................................................................. 130
6.5 LMS based adaptive model block ................................................................. 131
6.6 Stock data sample ......................................................................................... 134
6.7 Model orders for stock variables .................................................................... 134
6.8 Prediction results using ARIMA and adaptive filter models for open price TSD ........................................ 135
6.9 Prediction results using ARIMA and adaptive filter models for high price TSD ........................................ 135
6.10 Prediction results using ARIMA and adaptive filter models for low price TSD ........................................ 136
6.11 Prediction results using ARIMA and adaptive filter models for close price TSD ........................................ 136
6.12 Prediction results using ARIMA and adaptive filter models for number of shares TSD 137
6.13 Prediction results using ARIMA and adaptive filter models for number of trades TSD 137
6.14 Prediction results using ARIMA and adaptive filter models for turnover TSD 138
6.15 High price for training and prediction periods 139
6.16 Number of shares for training and prediction periods 140
