ACKNOWLEDGMENTS

In most of mankind, gratitude is merely a secret hope for greater favors.
- Duc de la Rochefoucauld, Maxims (1665)

This thesis arose in part out of years of research that has been done since I joined Prof. Obaid Siddiqi’s lab at NCMR. During the course of time, there were many people whose contribution in assorted ways to the research and the making of the thesis deserved special mention. It is a pleasure to convey my gratitude to them all in my humble acknowledgment.

In the first place I would like to record my gratitude to my co-supervisor Prof. Obaid Siddiqi for his advice and guidance from the very early stage of this research as well as giving me constant inputs through out the work. I am deeply obliged to him for his patience, kind support and bearing with my ups and downs during the course of my research. He provided me unflinching encouragement and support in various ways. His truly scientist intuition has made him a constant oasis of ideas and passions in science, which exceptionally inspire and enrich my growth as a student, a researcher and a scientist want to be. Initially, I was trying to do too many things together, but his constant inputs and encouragements transformed me as a researcher who is much more focused. It has certainly been a great learning experience for me on both professional and personal fronts. Thanks for bearing with me so patiently. I am indebted to him more than he knows.

I gratefully acknowledge my supervisor Prof. S. K. Jain for his patience, advice, co-operations and crucial contribution, which made him a backbone of this research and so to this thesis. He also taught us molecular biology and animal biotechnology during our MSc course at Hamdard University. His teachings helped us a lot during our PhD entrance interviews and further research. During my PhD, he helped me a lot with the official formalities of ICMR for my fellowship, without his help the completion of this research was impossible. He did his best to make things easier for me so that I could concentrate more on my research. I am very much indebted to him for his constant support throughout.

I would like to thank Indian Council of Medical Research (ICMR), New Delhi for granting me research fellowship throughout my PhD, this financial assistance was of utmost importance to me in successful completion of my PhD research. My special thanks to Dr. Sandhya Dwarkar of ICMR, who helped me out tremendously with the official works there, whenever I needed.

Many thanks to Prof. Gauti Hasan for her critical review of my research work throughout and for her useful inputs. Her experience of molecular biology helped me a lot in improving my experiments and analyzing my data critically. She has been very understanding and co-operative throughout.

I also like to thank Prof. M. M. Panicker for his valuable inputs about my real time PCR experiments. I learned a lot during our discussions.

I am thankful to Prof. Randolf Menzel (Frais Universität Berlin), Prof. Martin Heisenberg (University of Würzburg) and Prof. Barry Dickson (IMR, Vienna) for allowing me to spend some useful time in their labs. Prof. Cahir O’Kane (University of Cambridge) and Prof. Douglas Armstrong
(University of Edinburgh) for his timely inputs, advices and informations he provided. These experiences were of great value toward my research.

I gratefully thank Dr. Sandip Das, our teacher in MSc course, for his constant encouragements and support. I find it very comfortable sharing my thoughts with him and whenever I met him I felt a new enthusiasm and energy inside me.

Thanks to Sukant for teaching me the plasmid rescue experiments, larval plate assay and the electroschock conditioning. His guidance was very helpful in learning different new techniques when I joined the lab. He was also my roommate in initial days and we used to cook (our own novel dishes!) together with Aswin, and it was fun. I thank Deepthi for her useful inputs about molecular biology experiments and teaching me how to use BLAST search for localization of P-elements. I also thank Dr. Suboharan and his family, it was nice to see them around, during my initial period in lab. I would like to thank Shubh for his help with computer stuff and other scientific discussions, and also for showing me the S. P. Road, one of the most visited places by me till now.

Thanks to Partha (Pantikar's lab) for teaching me how to work with RNA without degrading it, to Shalma (Gait's lab) for teaching me real time PCR experiments and its calculations, Rupam and Basudha (both Pantikar's lab) for discussions about the quantification methods in real time PCR, Shiva (Shiva's lab) for discussion about real time PCR quantification, Guru Harsha (Vijay's lab) for teaching me fly genetics, Keshav (Veronica's lab) and Kavitha (Kavitha's lab) for their help with confocal microscopy, Raghav (Sowdhamini's lab) for teaching me Bioinformatics, Dr. Uma's lab for allowing me to use their Gel-Doc system and PCR machine, and Aniket (Veronica's lab) for teaching me adult fly brain dissection and immunohistochromy and its imaging.

I would like to thank Sam (Matthew's lab) for teaching me to use the PCR machine and also helping me out initially when I was in the process of standardizing a better way to grind fly's antenna to extract RNA. I enjoyed few very nice classical music programs with him and Kavitha (same lab), and learned many new things from them about different forms of music and musical instruments.

It is a pleasure to thank Kerojett (he is really a hero) of Dr. Upendra's lab at MRDG, IISc, he is certainly one of the best persons I have ever met. I learned many many things from him. We used to sit for hours, planning and discussing about different genetic crosses and other experiments. He always had time for me, whenever I needed. I really enjoyed talking to him and because his help I could successfully do my inverse PCR experiments and the P-element excision experiments. I really appreciate his helping nature and adore his friendship.

I would like to thank my past to present lab members- Deepak for being a great down to earth human being and I enjoyed talking science with him, Bilal for his caring brother-type nature, Uma, Gayathri, Proleta for their nice companies and funny talks during tea breaks and in lab dinners.

I really enjoyed my trip to Kerala with Satya, we visited home of Shamsudheen, our ex-colleague, it was a memorable experience. We three had great fun there and would cherish the memories for a long time.

I would like to thank my present lab members- Yuhin, I have always regarded him not only as my best friend but he is like my brother. I really appreciate his simplicity and true-at-heart nature. We enjoy all kinds of discussions- scientific and non-scientific. His presence around did make a difference to my life and research. Abu has been a good source of inspiration and has helped me out on many occasions.
whenever I needed. We all enjoy the unique ‘chemistry’ between him and Tufin, especially during our lab dinners, its great fun to be with them, enjoying their mutual leg pullings. Abu’s ‘constructive’ comments during our LJC and Tufin’s encyclopaedia were good inspirations (?)! During LJC, Abu’s funda about ‘tell me the results first’ and ‘a good LJC should not go beyond 5 to 10 minutes’ were unique and those little things made the LJC more interesting, and the Kolkata chat session afterwards was even more interesting. I really appreciate Sarit for his hard-working nature and dedication towards assigned projects, he is full of energy whenever I see him, its a great inspiration. I thank him for his help with computer stuff and giving me company during dinner in canteen. I am sure he will do some really good science in his future research career. I would like to thank Dr. Baktha, the presence of a senior person in lab gives a different kind of experience and I like this. Thanks to Jenni and Preetha for their company for tea in lab and Faran, that was a good time, Jenni is still with us with all that lively mood and now showing her skills to be a great researcher. I appreciate Farhan for his hard-working and helping nature.

I would like to extend my gratitude to the members of Prof. S. K. Jain’s lab in Jamia Hamdard. Deewan Sh, Seema, Madni Bhai, Kishwer Bhai, Pankaj and Skandar were of great help whenever I needed.

I am thankful to my MSc batchmates Srijita, Kishwer, Farah, Qudsi and Ritu. I always enjoyed my time with them whenever I was in Delhi during my PhD. We all are scattered now, in different parts of the globe, but we still share the same strong bond. My special thanks to my friend Kishindra, whose selfless and helping nature I have always appreciated. I truly adore him as my close friend. I will cherish our friendship forever.

My special thanks go to the Hamdard ex-students here at IISC. With Richa, Shivendra and Rupesh I spent some real good time, roaming around different places in and around Bangalore. I will never forget the fun we had during our trips to Malshej and Pundicherry. We come from three different batches of MSc in Hamdard, but get along so nicely, and thats the beauty of our relationship. I will cherish the memories of our birthday parties, dinners and get-togethers. I should especially thank Richa for being what she is. There is a saying, that we should not only try to find out the similarities but should also celebrate the differences. And its true in our case. Though we are very different from each other, still enjoy our companionship and discussions. Presence of her has made a difference in my life during my research work here.

Where would I be without my family? My beloved parents deserve special mention for their inseparable support and prayers. They have always shown great faith in me and that makes me feel more responsible towards my duties for my family. My Father has always been so encouraging and mother been so loving and caring. I share a unique bond and understanding with all my siblings and I adore each one of them. I should specially thank my brother Ranj, he has been a great source of inspiration for me, we are not only brothers but like friends, we share our feelings and thoughts with each other comfortably and most importantly understand each other very well. He has always supported me in the best ways he could and it has been very important for me during my last phase of research. My youngest brother Waquar, I really admire him for his responsible, caring and thoughtful nature for our family.
Words fail me to express my appreciation to Anu whose dedication, patience, love, care and persistent confidence in me, has taken the load off my shoulder. I owe her for being unselfishly let her intelligence, passions, and ambitions collide with mine. She has been my source of inspiration, strength and love throughout. She was always there beside me in my ups and downs. I feel so lucky to have her in my life. It wouldn’t have been this bearable if I didn’t have her in my life. Thanks for everything.

I would like to thank NCBS Staff, Mr. Ashok Rao for helping me with the administrative works, Mr. Ranjith for helping me in order processings, Mr. Geetam and Mr. Jaiprakash for assistance to instrumentations, Mr. Gajendra for providing fty stocks, Mr. Nagaraj for providing stores items with so much ease, kitchen people for constant supply of fty media bottles and vials and also glasswares, Ramesh (the Head Security) for his smiling face, helping nature and Kannada speaking abilities (it was useful to me at few important occasions I remember), Chandra (bus driver) for stopping bus to pick me up at odd places sometimes, the NCBS Reception (Basavang Patil, Srinivas, Anand, Khalid and others) for helping me with emergency shuttle pick ups and drops without any delay.

My thanks to the enthusiastic members of the NCBS Cricket Team for their active participations in practice (Republic Day and Independence Day friendly matches) and big matches against JNCASR or IISc. Those one or two hours of evening play were really refreshing after the day-long research schedule. The lush green lawn of NCBS was like cozy bed for fielders and we all enjoyed playing the game.

Finally, I would like to thank everybody who was important to the successful realization of thesis, as well as expressing my apology that I could not mention personally one by one.

Above all, I thank the Almighty for the omnipresence, whatever I am and have right now, it all stems from the loving grace and mercy of the God. He alone deserves all praises and glory for without Him, I can do nothing. Without Him, I am nothing.

(Jawaid Alihan)
