“Without a heart transformed by the grace of GOD, we just continue to manage external and internal darkness”

Words are often less to revel one’s deep regards. With an understanding that work like this can never be the outcome of a single person, I take this opportunity to express my profound sense of gratitude and respect to all those who helped me throughout the duration of this work.

To start with, all the thanks and appreciations go to my advisors Prof. (Dr.) S. H. Pawar and Prof. (Dr.) B.M. Tiwale for their unconditional support and help, without which this work would have never been accomplished. I have gained tremendous knowledge and experience, academically and professionally, from interacting with them and being part of their research groups. They have been tremendous mentors for me. I would like to thank them for encouraging my research and for allowing me to grow as a research scientist. Their advice on both research as well as on my career have been priceless. I also thank the entire faculty members of Centre for Interdisciplinary Research for their unhesitant aid whenever they are approached.

My deep appreciations to Dr. V.V. Bhosale and Mr. S. P. Kole, the Registrar and Finance officer of D.Y. Patil University, Kolhapur and other staff members who provided me genuine research facilities available in and out of the university.

I am thankful to the authorities of Department of Atomic Energy-Board of Research in Nuclear Sciences (DAE-BRNS), Trombay, Mumbai, Government of India for the Junior Research Fellowship and Department of
Science and Technology, Delhi, Government of India for Project Assistant Fellowship.

I am thankful to Dr. R. S. Ningthoujam, Dr. C. A. Betty, Dr. P. A. Hassan, Dr. Kanhu C. Barick and Amaresh Prasad, BARC, Mumbai, and Dr. N. Basavaiah, Indian Institute of Geomagnetism, Mumbai, as they helped a lot in experimental part of my work. I am also grateful to Dr. S. D. Sartale, Pune University, Pune, for being helpful in getting characterizations of my samples.

I am very much thankful to each and every teacher that taught me everything I know. Thanking them is just a way to show them my respect for them; otherwise it is absolutely impossible to bind my feeling of respect for them in any language.

A special thank goes to my team mate and my friend, Mr. Rakesh Patil, who has always been there to help me, to support morally and to give scientific suggestions about the task. I am very grateful to my friends in Centre for Interdisciplinary Research, D.Y. Patil University, Kolhapur, for useful scientific discussions stimulating new ideas. Of course, the company and the help rendered by them in the department will ever be remembered. I am also thankful to my friends in Shivaji University, Kolhapur, who have contributed to the successful completion of this work, one way or the other.

Lots of thanks to my friends and well-wishers for their moral support. Their valuable advices gave me strength in my stress and worse conditions.

To all of the people along the way who hurt me, lied to me, betrayed me and broke my heart... They forced me to see the change I needed in my life and gave me the determination, motivation and a belief that I needed to change. They gave me more than they could ever take from me, so thank them!
Last but not least I would like to thank the special people who supported me throughout my educational endeavour, my family. I am deeply grateful to my parents who instilled in me the love of science and the ambition to do my best in every aspect of my life, to my siblings who did not spare any effort to inspire and help me through this process. Words cannot express how grateful I am to my family for all of the sacrifices that they’ve made on my behalf. Their prayer for me was what sustained me thus far.

For those who I have failed to mention, I sincerely apologize, and I thank you from the bottom of my heart.

Ms. Prajakta Balakrishna Shete
