ACKNOWLEDGMENTS

No enterprise of any magnitude can be solely the labour of a single individual, and this is especially true of a research project. As the work is now complete in some fashion, I am gratefully conscious of help received of different kinds from many quarters.

The books and journals I have drawn upon for information and opinion have been formally acknowledged in the body of this dissertation and in the bibliography at the end. I am indeed grateful to their authors even where I have not altogether been able to accept their views on one thing or the other. If there should be any inadvertent omission of acknowledgment in dealing with material gathered at various times and places over years, I should indeed be very sorry and apologize to the author for the lapse.

(viii)
Foremost among those to whom I am directly indebted is my supervisor for this work, Professor Mohan Lal, without whose invaluable guidance and active personal interest, this dissertation could not have been completed. It is a pleasure as well as a duty to acknowledge my heavy debt to him and record my gratitude.

Among others, I should like to thank here my colleagues Mr. S. Mallikarjunan for some useful discussions and Mr. (MFS) K. Sivaraman for help with the typescript.

The Librarian, the Assistant Librarian, and their colleagues in the Jawaharlal Nehru Library of this University have been most helpful and courteous at all times, and I am happy to thank them here.

I am thankful to Shri Shoukat Ali for his careful and efficient typing of this dissertation in a very short time directly from the manuscript.

(ix)
To my brother-in-law Shri C.K. Vajpai of the Oxford University Press, New Delhi, I owe so much that I can neither repay nor even describe the debt but only acknowledge it gratefully here.

A major contribution towards the completion of this work, which I must acknowledge here, has been that of my wife, not only for helping me to get it typed when it had been written but for a very understanding patience during the much longer period of this research effort.
