List of Tables

2.1 Summary of time series models for crude oil price forecasting 15
2.2 Summary of fundamental models for crude oil price forecasting 17
2.3 Summary of factors influencing oil prices ...................... 21
2.4 Data characteristics, preprocessing technique, input variables & its selection method ......................... 23
2.5 Forecasting performance comparison of Neural Network models ......................................................... 24
2.6 Neural Networks model’s architecture ........................................ 25
2.7 Data characteristics, preprocessing technique, input variables & its selection method ......................... 26
2.8 Forecasting performance comparison of Support Vector Regression models ........................................... 27
2.9 Support Vector Regression model architecture ................................. 27
2.10 Data characteristics, preprocessing technique, input variables & its selection method ......................... 27
2.11 Forecasting performance comparison of Genetically evolved models ..................................................... 28
2.12 Genetically evolved model’s architecture ........................................ 28
2.13 Data characteristics, preprocessing technique, input variables & its selection method ......................... 29
2.14 Forecasting performance comparison of Genetic Algorithm and Neural Network models ...................... 29
2.15 Genetic Algorithm and Neural Networks model’s architecture ................................. 29
2.16 Data characteristics, preprocessing technique, input variables & its selection method ......................... 31
2.17 Forecasting performance comparison of Wavelet and Neural Network models ...................................... 31
2.18 Wavelet and Neural networks model’s architecture ........................................ 31
2.19 Data characteristics, preprocessing technique, input variables & its selection method ......................... 32
2.20 Forecasting performance comparison of Fuzzy Neural Network models ........................................... 33
2.21 Fuzzy Neural Networks model’s architecture ......................... 33
2.22 Data characteristics, preprocessing technique, input variables & its selection method .......................... 34
2.23 Forecasting performance comparison of Decomposition based Neural Network models ...................... 34
2.24 Decomposition based Neural Networks model’s architecture ......................................................... 34

3.1 Description of input variables under Group-A ................. 53
3.2 Summary Statistics for Group-A ................................. 54
3.3 Description of input variables under Group-B .................. 56
3.4 Summary Statistics for Group-B ................................. 57

4.1 Selected features by the stage one irrelevance filter for WTI spot price market ........................................... 69
4.2 List of pair of variables having negative interaction information .................................................. 70
4.3 Filtered feature by redundancy filter in stage two of proposed algorithm ........................................... 71
4.4 Performance criterion for comparing \( MI^3 \) with different feature selection methods ........................... 74
4.5 Performance criterion for comparing \( I^2MI^2 \) with different feature selection methods ..................... 76
4.6 Out-of-sample forecast comparison .................................. 78
4.7 Selected features by the stage one irrelevance filter for WTI spot price market ........................................... 80
4.8 List of pair of variables having negative interaction information .................................................. 81
4.9 Filtered features by redundancy filter in stage two of proposed algorithm ........................................... 81
4.10 Performance criterion for comparing \( MI^3 \) with different feature selection methods ..................... 83
4.11 Performance criterion for comparing \( I^2MI^2 \) with different feature selection methods ..................... 85
4.12 Out-of-sample forecast comparison .................................. 86

5.1 Correlation coefficient for Group-B before and after crisis .................................................. 94
5.2 Relevance rank based on stage one of proposed algorithm for sub-period 1: January 2004-July 2008 .................. 95
5.3 List of pair of variables having negative interaction information 97
5.4 Filtered features by redundancy filter in stage two of proposed algorithm for sub-period 1 .......................... 98
5.5 In-sample performance of proposed methodology .................. 98
5.6 Out-of-sample forecast comparison ................................ 99
5.7 Relevance rank based on stage one of proposed algorithm for sub-period 2: August 2008-November 2012 .................. 101
5.8 List of pair of variables having negative interaction information 102
5.9 Filtered features by redundancy filter in stage two of proposed algorithm for sub-period 2 .......................... 103
5.10 In-sample performance of proposed methodology ............. 104
5.11 Out-of-sample forecast comparison ............................... 105
