CONTENTS

CHAPTER I INTRODUCTION 1-12

1.1 Queues in general 1-2
1.2 Characteristics of the queue 3-5
1.3 Brief review of the work on queueing theory 6-7
1.4 Review of the relevant work 7-9
1.5 Problems under investigation 10-11
1.6 Symbols and notations 12

CHAPTER II TANDEM QUEUE MODEL WITH THREE STAGES APPLICABLE TO HOSPITAL SERVICES 13-31

2.1 Introduction 13-14
2.2 Mathematical Formulation 14-17
2.3 Solution using D-operator 17-22
2.4 Rate Transition Diagram 22-29
2.5 Illustration and Discussion 29-31

CHAPTER III TANDEM QUEUE MODEL WITH BRANCHING AND TWO SECOND STAGE SERVERS 32-45

3.1 Introduction 32-33
3.2 Mathematical Formulation 33-35
3.3 Solution using D-operator 36-40
3.4 Rate Transition Diagram 40-44
3.5 Illustration and Discussion 44-45
# CHAPTER IV  TANDEM QUEUE MODEL WITH BRANCHING APPLICABLE TO HOSPITAL SERVICES 46-61

4.1 Introduction  
4.2 Mathematical Formulation  
4.3 Solution using D-operator  
4.4 Rate Transition Diagram  
4.5 Illustration and Discussion  

# CHAPTER V  A QUEUEING SYSTEM WITH TWO STAGE SERVERS AND NO PASSING 62-69

5.1 Introduction  
5.2 Mathematical Formulation  
5.3 Solution  
5.4 Illustration and Discussion  

# CHAPTER VI  QUEUEING MODEL IN COMPUTER SYSTEM 70-82

6.1 Introduction  
6.2 Mathematical Formulation  
6.3 Rate Transition Diagram  
6.4 Solution  
6.5 Illustration and Discussion  

# CHAPTER VII  MODIFIED QUEUEING MODEL IN COMPUTER SYSTEM 83-92

7.1 Introduction  
7.2 Mathematical Formulation I  
7.3 Illustration and Discussion I  
7.4 Mathematical Formulation II  
7.5 Illustration and Discussion II
