ACKNOWLEDGEMENT

There are many people who deserve to be acknowledged for their support and continued encouragements in making this endeavour a reality. This is an opportunity to express my most humble appreciation and gratitude to each and every one of them.

I offer my sincere gratitude to my Guide Dr. A. G. Devi Prasad for his ongoing involvement, contributions, and support throughout this research. He introduced me to the world of Phytochemistry. Dr. A. G. Devi Prasad knew when to encourage my efforts and more importantly, when not to intervene. I thank him from bottom of my heart for endless hours of toil over draft after draft, editing, directing, encouraging, and with consistent reminders for patience. His experience in paying attention to minute details in writing was a great asset in keeping me focused on the final products. I am indeed lucky to have him as a research mentor.

I am highly indebted to Mr. Gopinath (Ex-Syndicate member, University of Mysore) for his moral support and immeasurable cooperation during the research work.

I wish to express my deep appreciation to Professor Dr. Samir Ross for his timely, support, guidance and for identification of compound.

My sincere thanks and appreciation to Dr. Vinitha Chaturvedi for her help to study the antimycobacterial activity of medicinal legumes.

I wish to express my deep appreciation to Dr. M.S. Thakur (Senior Scientist CFTRI) for his help to do Instrumentation work.
I am thankful to Austin Richard, Syed Baker, Brijesh for their help while carrying out biological activity of medicinal plants.

I am very thankful to Dr. Sharanappa Department of Bioscience, Hassan, for his insight, understanding help during plants collection.

My precious thanks to Shwetha, Sapna, Komala and Radha for their help during my thesis work.

I wish to express my heartfelt thanks to all members of the Department of Environmental of Science, University of Mysore and to the members of Department of Biochemistry, Microbiology, Biotechnology and Chemistry,
