ACKNOWLEDGEMENTS

It gives me immense pleasure to express my deep sense of gratitude towards my guide, Dr. Baban Ingole, who is presently holding the post of Scientist G at National Institute of Oceanography, Goa. His current position is the reflection of his hardwork and calibre through the years of research in Biological Oceanography Division. His constant encouragement and motivation acted as an impetus through the journey of my Ph.D. I also thank the Director, NIO, CSIR, Dr. Sheteye, for permitting me to carry-out the experimental work at the research lab.

I sincerely thank my co-supervisor, Dr. Y. Anjaneyulu, retired professor, JNTUH, for accepting my request for co-guideship without any hesitation. He is presently working as Professor and Director, TLGVRC, College of Science and Technology, Jackson State University, USA. Despite being busy with his work, he was very co-operative through the course of work.

I was blessed to work under Dr. C. Ravindran, Scientist C, Biological Oceanography Division, NIO, Goa. He was a teacher and a mentor who thoroughly directed me all through the principles of molecular studies. I was happy to be associated with Dr. Mohan Dale, Scientist C, BOD, NIO, Goa, for his counselling and strengthening words during a morale low. And so was I lucky enough to encounter a pedagogic teacher Dr. Deepti Deobagkar, Professor, Department of Zoology, Pune University, who through her advice and
reprimand as and when required, saw to it that I get the principles of research straight.

It will be unpardonable, not to mention my gratitude towards Dr. **Loka Bharathi, Dr. Ramaiah, Dr. Mohan Das**, who despite being remotely connected helped me with funding of chemicals as and when required for my experiments.

Last but not the least, I thank all the **friends and well-wishers** of NIO, whose constant support and encouragement held me tight through this struggle.

I sincerely thank **Prof. M. G. Pai, Principal**, Goa College of Pharmacy, and all my colleagues of the college for being highly understanding and encouraging, which helped me through the final phases of my thesis writing. Especially are my senior colleagues of the Pharmacognosy department, **Dr. A. B. Joshi and Ms. Maya Bhobe**, whose parenteral affection acted as a comforting factor and helped me concentrate on my work.

I would like to express my sincere thanks to administrative staff of **JNTUH R&D cell** and a special thanks to **Dr. Vijaykumar Reddy**, Professor, Dept of Mechnical Engg., **Dr. Krishna Mohan**, Professor and Head, Dept of Pharmaceutical Sciences, **Dr. Srinivasulu and Dr. Ajitha**, Professors, Dept of Pharmaceutical Sciences, JNTUH.

It will be ungrateful not to express my salutes to all my teachers so far, who have moulded me into what I am today and all the **scientists of yester generations**, for paving the way so far, which
made us aware of the basic concepts of science, without whose knowledge it would not be possible to progress further.

Acknowledgement would be incomplete without the mention of my family, my parents, my husband and my son, whose constant love and reassurance pulled me through.

My gratitude will be better expressed in a language in which I perceived things: I consider this thesis to be a tissue culture experiment whose idea was first conceived in the mind of Dr. Subhash Marihal (my former guide) and forwarded by Dr. Ingole. In this experiment, the basic required academic gene is the contribution of my father (who, though received many accolades for his administrative skills, is more of a true academician), the medium of growth is the role of my husband (had he not been supportive enough I would not have seen the present day) and the flask is the role played by my mother (though inert in nature, the lack of which will not support the experiment). The carbon source was contributed by Dr. Sanitha Sivadas (who introduced me to Zoanthids) and Mr. Anna Gophane (who helped me perform the major part of the experiment). The role of macro nutrients was played by Mrs. Sandhya Nanajkar, Mrs. Reshma, Mrs. Sini, and Mr. Mandar Nanajkar in the Benthos Lab and Mrs. Priyanka, Ms. Akhila and Mr. Sabapathy in the Gene Lab (without whose moral support it was difficult to survive many tough situations). My other colleagues in both the labs played their own sweet role of micro nutrients doing me favours whenever essential. The required quantities of Vit M and other phytohormones were supplied by Dr. Loka Bharathi, Dr. Ramaiah
and Dr. Mohan Das. The whole flask was under the constant supervision of Dr. Ravindran and Dr. Deepti, who, true to their names, played the role of light, helping me find my way in the darkness. Besides these visible aspects, the abstract, unexplainable, driving force in the system, which is called life and in the absence of which the system is considered dead, is the role played by my son. For all the lack of attention and priority towards him during this period, the least I can do is the dedication. Finally, I consider myself being an intangible link between all these components of the experiment and conducting the experiment under the purview of the Supreme Director GOD.

Mrs. J. Mythili Krishna.
