ACKNOWLEDGMENT

I would like to express my deep and sincere gratitude to my Supervisor, Prof Vinod Mahna, Dean, Manav Rachna International University, Faridabad, for giving me an opportunity to work in this area. His wide knowledge, logical way of thinking and encouragement has been of great value for me. His understanding and personal guidance have provided a good basis for the present thesis. Prof. Mahna was always there to listen patiently and advise generously. He showed me the different ways in which I could approach and resolve research problems and taught me how to be persistent and dedicated in accomplishing my goals. He was always there beside me to discuss ideas, edit my work and ask the right questions to encourage me to think through my problems. Prof. Mahna provided all the help which I could not do without during my data collection days.

During this work I have collaborated with my colleagues at Manav Rachna College of Engineering, Faridabad for whom I have great regard, and I wish to extend my warmest thanks to all those who have helped me with my work.

I am forever indebted to my parents and for their understanding, endless patience and encouragement when it was most required.
