APPENDIX NO : 5

Directions Regarding the method of Item Rating and a Sample of Five Point Scale

An examinee will be asked to fill in the gaps of different subunits of trigonometry. The subunits are stated in a copy of well defined behavioural domains. The items have been generated on the domains as stated in it. I request you to kindly rate and let me know whether each items measure the objective it is intended measure. The rating may kindly be made for each item according to any one of the following three situations:

+1 = definite feeling that an item was a measure of an objective.
0 = uncertainly as to whether an item a measure of an objective.
-1 = definite feeling that an item was not a measure of an objective.

More over, I request you to express your worthy opinion on the followings point.

Whether the items generated from item form of trigonometry are representative of that domain.

Your opinion may kindly be conveyed through the five point scale. The five point scale contains one characteristic. There are five points under the characteristic. There are five words in a regressive order under the five points. Kindly make an indicative sign expressive your opinion.

Do the items properly, represent domain specification?

Completely Mostly Moderately Less than moderate much less
