CHAPTER VI

APPLICATIONS, LIMITATIONS AND SUGGESTIONS
CONTENTS

Application of the research

Limitation

Suggestions
APPLICATION OF THE RESEARCH

1. **ATTRACTION SCALE** will help in clarifying the doubts in the mind of people.
2. This test will also induce the ideas in the mind of individual.
3. It will provide an insight of various factors and determinants of attraction.
4. This test can help the individual during the mate – selection process.
5. This test also functions as a screening instrument that gives the picture of our own personality outlook, as well as the preference of our factors or determinants of attraction.
6. The test can be used for counseling purpose.

LIMITATIONS

1. **ATTRACTION SCALE** is a self-administered test. As a result, there is a danger of getting false responses. To overcome, it is necessary that the test administrator should establish adequate rapport with the sample before embarking further.
2. The aim of the investigator is not to measure the depth of attraction.
3. The test is not administered on a large sample.
4. In the present research, caste and religion as a variable has not been undertaken.
5. The sample has been taken from Ahmedabad City as it offers a cosmopolitan atmosphere. The rural population is been excluded here.
6. The investigator has not taken the early adolescence period.
7. **ATTRACTION SCALE** does not conclude whether a person is attracted or not. It functions as a mirror, which shows the reflection of our personality, as well as our preference of factors, and determinants during integration process.
8. ‘**ATTRACTION-CHECKLIST**’ is used as corroborative material for the attraction scale. Further enhancement of the checklist has not been undertaken.
SUGGESTIONS

1. Further study of attraction could be directed by taking religion and caste as variables.
2. The research should be conducted on the rural population.
3. An attraction level of the early adolescent period should be done so for future study.
4. A more descriptive detail can be obtained by taking a large sample.
5. A comparative study can also be directed between the medium of languages.
6. A study of 'ATTRACTION-REPULSION' should be carried out for the future course. It will be a notch in the scientific world, because it will be interesting to ferret out the results of these two sides of the same coin.
