CHAPTER 3: REVIEW OF LITERATURE 4-90

3.1. *Escherichia coli*-Historical Considerations.

3.2. Phylogeny of *Escherichia coli* strains.

3.3. *Escherichia coli*: Characteristics and serological grouping.

3.5. Extraintestinal pathogenic *E.coli*: Virulence factors (VFs)

3.5.1. Adhesins

3.5.2. Toxin

3.5.3. Iron and the virulence of *Escherichia coli*.

3.5.4. Capsular polysaccharide

3.5.5. Other virulence factors.

3.6. Diseases induced by ExPEC

3.6.1. Urinary tract infection (UTI).

3.6.2. Sepsis

3.6.3. Neonatal meningitis

3.6.4. Pneumonia and surgical site infections

3.6.5. Wound infection
3.7. Antimicrobial activity

3.7.1. History

3.7.2. Classification of Antibiotics

3.7.3. Antibiotic resistance in *Escherichia coli*

3.7.4. Mechanism of Antimicrobial Resistance

3.7.5. β–lactam Antibiotic Family.

3.7.6. Detection of ESBL, ampC and MBL production.

3.7.7. Quinolones

3.7.8. Trimethoprim and sulphonamide

3.7.9. Aminoglycoside:

3.8. ExPEC associated studies based on clinical, phenotypical and genotypical characters.

3.9. ExPEC: Control measures.

CHAPTER 4: MATERIAL & METHODS 91-101

CHAPTER 5: RESULT 102-137

CHAPTER 6: DISCUSSION 138-152

CHAPTER 7: SUMMARY 153

CHAPTER 8: CONCLUSIONS 154-156

CHAPTER 9: BIBLIOGRAPHY 157-184
