ACKNOWLEDGEMENT

This thesis is my final endeavour towards getting my Doctorate; to accomplish the most desired dream of my life. I dedicate this accomplishment to numerous people including my well wishers, colleagues, principals and dear students of various schools and many others who helped, supported and encouraged me by sparing their valuable time. My friends were my real support during the hard times. They always encouraged me and showed me the positive sign of progress. At the end of my thesis, it is a great pleasure to thank all those who contributed in different ways for the success of this study and made it really an unforgettable experience for me.

I convey my profound sense of gratitude to my respected guide Dr. Rajesh Sharma for his encouragement and guidance. He has been all the time the source of information to me and I consider him to be an “Academic Saint”. Without his constructive suggestions and encouragement, it would be difficult to finish this work. It was pure pleasure to work under the able guidance of Dr. Rajesh Sharma. I, therefore take this opportunity to extend my heartiest thanks to him. Probably, had it been for his honest and committed approach to my work, I would never have been able to achieve this today. I will not justify myself if I don’t mention Mrs. Sharma who always gave me energy by offering me tea or coffee which I needed the most during that time.

I must express my thanks to the principals of all the schools, teachers and students who supported me and helped me for a data collection and without their support it would have been impossible to proceed with my PhD. work. I take the opportunity to convey a special acknowledgement to the Principal of my school, Mr. Scaria Thomas and thank Mr. Purohit, the principal of the granted section of our school, who granted permission for collecting data from the school. Without their great support it would be difficult for me to proceed with my research work.

I sincerely show my gratitude to Sonal Madam, Dr. Milind Mistry, Dr. Ashwin , Dr. Dipti Bhatt and Dr. Pravin Gunjal, who spent their valuable time in rectifying the inventory given to them before the pre pilot testing. They gave appropriate suggestions and guidance which helped me to go ahead in my work.

I would also like to extend my thanks to my friends, Mrs. Preeta Menon and Mrs. Hema Jethi, who were my support all through.
I would like to acknowledge Dr. Gunjal who helped me with the computer calculation part. With his help, I could finish the analysis part of the thesis. This has to be specially mentioned because I am practically an amateur at the subject of surveys, compilation, calculation and combination of the data collected. It was with his help that I was able to complete a very significant section of my thesis effectively.

Ultimately, I would like to pay my sincerest regards to my father-in-law, my mother-in-law, my son, my parents, for their great moral support. They were the ones who understood the dream that I had within myself, inspired me to take it up and promised and assured me unconditional support all the time and in every way possible. I heartily thank them today for all their blessings, efforts and motivation during the course of my Ph. D work. I thank all my friends who have helped me directly or indirectly in making this attempts a successful one.

Last but not the least, I thank my husband, my pillar of support, who helped me in all the possible ways he could. I am really thankful to him as he helped me in collection of data, which is the most difficult and tedious part of the research. Without his help and support, it would be impossible for me to fulfill my life’s dream.
