ACKNOWLEDGEMENT

Steps of temple and deity both are made up of same stones but the stone that tolerated continuous hammering became the worshipped deity. Similarly research we have been provided with same raw stones, some make steps and some make deity by their continuous effort and perseverance. Thus research is a problem of continuous striving for excellence with full use of resources available with us.

As “No single flower makes a garland”, no work can be completed without cooperation and blessings of many people associated directly or indirectly with the research work. Expression of mind by words is really very, very difficult. The expressivity of words looses significance when we search for an appealing sentence of gratitude and obligations, since acknowledgement is the only part of thesis, which lacks guidance and represents a help rendered by family, teachers and friends. Here I would like to thank the people who had spent their precious time for me and who had directly or indirectly supported me during various stages of my research work.

God blessings, hard work and positive approach can lead one to a path of success. I am thankful to GOD for his divine grace bestowed me when needed, shown me the right way and right people.

“Guru Brahma Gurur Vishnu Guru Devo Maheshwaraha
Guru Saakshat Par Brahma Tasmai Shree Gurave Namaha”

I take this opportunity to express my gratitude and indebtedness towards my esteemed guide and mentor Dr. K. R. Vadalia, for his affection, constant encouragement, whole hearted support and valuable suggestions. Thankfully, I have had the opportunity to work with a great person like him who is far more talented, dedicated and experienced than me at every step of the way. I know I can be quite a handful at times, but my mentor have been generous enough with their time and trust to permit me to pursue my own paths. I am short of words to thank him for his unlimited patience during my entire research work.

Words could not be adequate to express how much I am thankful to Shree Saraswati Social and Education Trust, Rajkot, who has always given me constant backup and continuous support for my research work by providing me all the necessary facilities that leads to successful completion of my research work.
It gives me immense pleasure to recall the timely help, support, encouragement and discussion extended by my friends and colleagues.

I am extremely thankful to Sumandeep Vidyapeeth, Baroda for providing IR spectra, SAIF, IIT, Madras for NMR spectra, Saurashtra University, Rajkot for Mass spectra and SAIF, STIC, Cochin for elemental analysis of the synthesized compounds.

I express my whole hearted thanks to Director, Micropharm diagnostic center, Gandhinagar for providing antimicrobial and antitubercular data of the newly synthesized compounds.

Finally, at last but not the least, there are no words, which can express my gratitude towards my family for their constant support, unlimited patience, immense care and divine love towards me, which made my dream come true.
