Fig.VII.1. Classification of Environmental perception and environmental quality. 269

Fig.VIII.2. Source of water supply, distribution of network and sewerage network (1993). 270

Fig.VIII.3. Location of AMC hospitals 276

LIST OF APPENDICES

Appendix.I.1. List of wards with names and numbers 297

Appendix.I.2. List of regions with no. of wards. 297

Appendix.I.11. Questionnaires 296-302

Appendix.I.111. Index No. 303

Appendix.IV.1. Ecological variable: Rainfall and diseases. 304-307

Appendix.IV.2. Hypothesis: There is a tendency of having more cases of typhoid fever during the pre-monsoon period. 308

Appendix.IV.3. Hypothesis: There is a tendency of having more cases of gastro-enteritis during rainy season. 308

Appendix.IV.4. Hypothesis: There is a tendency of having more cases of cholera in the rainy season. 309

Appendix.IV.6. Hypothesis: Water-borne diseases is related to younger population which can be provide with the help of co-relation (1991). 310
Appendix.IV.7.Hypothesis: Water-borne diseases is negatively related to income

Appendix.IV.8.Hypothesis: Water-borne diseases is negatively related to education.

Appendix.V.1.Hypothesis: Water-borne diseases related to the availability of water.

Appendix.V.2.Hypothesis: Cases are seen more in number where the total urban environmental (inner and outer) quality is poor.

Appendix.VII.2.\( \bar{X} \), S.D. and C.V. of water-borne diseases.

Appendix.VII.3.Gastro-enterities: \( \bar{X} \), S.D. and C.V.

Appendix.VII.5.Viral Hepatitis: \( \bar{X} \), S.D. and C.V.

Appendix.VII.6.Typhoid: \( \bar{X} \), S.D. and C.V.

Appendix.VII.7.Cholera: \( \bar{X} \), S.D. and C.V.

Appendix.VII.10.Typhoid 1989-1993, average cases

Appendix.VII.11.Cholera 1989-1993, average cases
