Acknowledgement

I am indebted to Professor Gunvant M. Desai for more than one reason. He introduced me to the topic, provided encouragement, and the much needed guidance. His insights into the agricultural development problems and policies have helped me to grasp the dimensions and complexities of the problem I have undertaken for investigation. At times he was unbearably demanding but this has helped me in sustaining my interest and the impulse needed for research. I shall always be grateful to him.

I am thankful to Dr. Gurdev Singh for his constructive comments and suggestions. Thanks are also due to Dr. Gunvant A. Patel for stimulating discussions on the changing environment under which fertiliser use has grown. I am thankful to Dr. Daroga Singh and Dr. S.K. Raheja of IARS, New Delhi, and Dr. M.K. Patel of Directorate of Agriculture, Gujarat for providing access to some secondary data.

I wish to express my gratitude to the present and outgoing Chairman of Centre for Management in Agriculture, IIMA and to Dr. C.G. Ranade, for, without their support, completion of this study would have been difficult.
Help from Revati, Madalsa, and Kartik was always available. I thank them.

I am thankful to Manjula for typing assistance and G.D. Patel for illustrations.

This research is dedicated to my teachers GM and Didi. They know the role they have played in my life.

And finally, Usha, my wife, and Viki, my daughter, have endured the stress and strain of my work with lot of patience and understanding. I am indeed thankful to them. Together we will share the fruits of this work.

D.C. Sah
