ACKNOWLEDGEMENT

The author sincerely expresses deep sense of gratitude and indebtedness to Dr. S.G. Desai, Research Guide, Head of the Department of Microbiology, School of Sciences, Gujarat University, for his inspiring guidance and encouragement during the course of investigations and for his keen interest and help in preparation of this manuscript. The author considers himself most fortunate to have availed of the opportunity to work with a scientist of his calibre and was greatly benefitted by his authoritative insight into the microbiological problems.

The author wishes to express his grateful thanks to Dr. N.K. Yadav and Dr. S.R. Dave, the staff members of the Department of Microbiology for their kind co-operation.

The author takes this opportunity to thank the authorities of Gujarat University and University Grants Commission for providing the financial support in form of Junior/Senior Research Fellowship.
Sincere thanks are also due to the Assistant Plant Breeder, Hill Millets Scheme, Waghai, Dangs for active co-operation and providing facilities to carry out some experiments on testing kodra and vari germ plasm for resistance.

The author wishes to thank his research colleagues, Mr. B.V. Patel, Mr. S.N. Shah, Mr. K.D. Patel and the students of the Department of Microbiology for their whole hearted co-operation, useful suggestions and constructive criticism from time to time.

The author is personally thankful to Mr. B.G. Talsania for the neat typing work and Mr. P.C. Desai for encouragement during the study.
