List of Figures

Fig. 1.1  Output characteristics of a common-emitter transistor  2
Fig. 1.2  (a) Block diagram of a dc-dc RC. (b) Simplified block diagram of a dc-dc RC.  3
Fig. 1.3  Two-element RNs. (a) SRC, (b) PRC, (c) CS-PRC, and, (d) CS-SRC.  6
Fig. 1.4  Three-element VNV RNs. Topologies shown in (b), (e), (h) and (i) have been studied in the past.  8
Fig. 1.5  Three-element VNI RNs. (a) PRC with input inductor, (b) LLC-type PRC, (c) LCC or series-parallel RC, and, (d) hybrid RC.  9
Fig. 1.6  Higher-order RNs reported in the literature.  10
Fig. 1.7  Circuit diagram of full-bridge converter [(a)] and waveforms of $v_{in}$ and $i_{in}$ in the discontinuous conduction mode [(b)], continuous conduction mode with leading power factor [(c)] and continuous conduction mode with lagging power factor [(d)].  12
Fig. 2.1  Block diagram of an IC.  35
Fig. 2.2  Loss free distributed constant line.  36
Fig. 2.3  Some application examples of distributed constant line type IC converters. (a) A MOSFET bridge exciting the sending end. The circuit configuration at the receiving end for (b) HID lamp ballast, (c) induction heating, and, (d) corona and plasma discharge application.  37
Fig. 2.4  Some lumped-element IC networks.  38
Fig. 2.5  Block diagram of a dc-dc RIC.  39
Fig. 2.6  Topological structures of electrical networks composed of maximum up to three branches.  41
Fig. 2.7  Composition of generic reactance $X_i$.  41
Fig. 2.8  Three- and Four-element RINs synthesized from topological structures $N_5$ and $N_6$.  45
Fig. 2.9  Topological structures of electric networks composed of four branches.  46
Fig. 2.10  Equivalent T-networks of (a) $N_7$, (b) $N_8$ and (c) $N_9$.  46
Fig. 2.11  Four-element RINs synthesized from topological structures $N_7$, $N_8$ and $N_9$.  51
Fig. 2.12  Illustrations of transformer parasitic components being absorbed in various RINs. (a) Topology $T_1$, (b) Topology $T_4$, (c) Topology $LA_2$ and (d) Topology $T_7$.  54
Fig. 3.1  Circuit diagram of (a) half-bridge and (b) full-bridge LCL-T RC.  57
Fig. 3.2  Plots of (a) $H$ and (b) $\phi$ in LCL-T RC as a function of $\omega_n$ for different values of $Q$ and $\gamma = 1$.  61
Fig. 3.3  $kVA/kW$ rating of LCL-T RC as a function of $Q$ for $\gamma = 1$ and $\omega_n = 1$.  62
Fig. 3.4  Open loop output characteristics of prototype LCL-T RC.  64
Fig. 3.5  Voltage and current waveforms at the output of inverter bridge. (a) $R_L=0.53$ $\Omega$ and (b) $R_L=0.1$ $\Omega$. Scale: 20 V/div (voltage), 5 A/div (current) and 2.5 $\mu$s/div.  65
Fig. 3.6  Efficiency of prototype converter as a function of output power. Plot-(a): $R_L = 0.53$ $\Omega$ and $V_d$ is varied from 5 V to 50 V. Plot-(b): $V_d = 50$ V and $R_L$ is varied.  65
Fig. 3.7  Circuit diagram of half-bridge LC-LC RC.  67
Fig. 3.8  Plots of (a) $H$ and (b) $\phi$ in LC-LC RC as a function of $\omega_n$ for different values of $Q$ and for $\psi=0.2$, $\gamma=0.8$.  69
Fig. 3.9  $kVA/kW$ rating of LC-LC RC as a function of $Q$ for different values of $\psi$ under the conditions $\omega_n = 1$ and $\gamma + \psi = 1$ (a) without considering the rating of $C_2$ and (b) considering the rating of $C_2$.

Fig. 3.10  Circuit diagram of half-bridge $T_3$ RIC.

Fig. 3.11  Plots of (a) $H$, (b) $I_{L1N}$ and (c) $\phi$ as a function of $\omega_n$.

Fig. 3.12  $kVA/kW$ rating of $T_3$ RIC as a function of $Q$.

Fig. 3.13  Photograph of the experimental prototype of $T_3$ RIC.

Fig. 3.14  (a) Experimental waveforms of voltage across switch $S_B$ [trace (1)] and $i_{L2}$ [trace (2)] at full-load (upper pair, 100 V/div, 5 A/div) and at no-load (lower pair, 100 V/div, 2 A/div). X-scale: 2.5 $\mu$s/div. (b) Experimental waveforms of voltage across switch $S_B$ [trace (1)] and current through it [trace (2)] at full-load (upper pair, 100 V/div, 2 A/div) and at no-load (lower pair, 100 V/div, 1 A/div). X-scale: 2.5 $\mu$s/div.

Fig. 3.15  Open-loop output characteristic and plots of $I_{L2}$ as well as efficiency of prototype $T_3$ RIC.

Fig. 3.16  Circuit diagram of proposed half-bridge LCLCL-T RC with (a) discrete reactive components and (b) IMC.

Fig. 3.17  Plots of (a) $H$ and (b) $\phi$ in LCLCL-T RC as a function of $\omega_n$ for different values of $Q$ and for $\alpha = \psi = \gamma = 1$.

Fig. 3.18  $kVA/kW$ rating of LCLCL-T RC as a function of $Q$ for different values of $\alpha$ and $\gamma$ and respective $\psi = \psi_{crit}$ showing the existence of $Q_{opt}$.

Fig. 3.19  Photograph of the experimental prototype of LCLCL-T RC.

Fig. 3.20  Experimental waveforms of voltage across switch $S_B$ [trace (1), 50 V/div], $i_{Lp}$ [trace (2), 5 A/div], $i_{ls}$ [trace (3), 1 A/div] and $i_o$ [trace (4), 1 A/div]. (a) At full-load. (b) At 5% of full-load. X-scale: 2.5 $\mu$s/div.

Fig. 3.21  Experimental waveforms of voltage across switch $S_B$ [trace (1)] and current through it [trace (2)]. Upper pair of
waveforms: full-load condition, 50 V/div and 5 A/div, respectively. Lower pair of waveforms: At 10% of the full-load, 50 V/div and 2 A/div, respectively. X-scale: 2.5 µs/div.

Fig. 3.22 Experimental output characteristic of LCLCL-T RC.

Fig. 3.23 Experimental waveforms of \(v_o\) [trace (1), 100 V/div], rectified output current [trace (2), 1 A/div] and \(i_o\) [trace (3), 1 A/div] under transient condition with step change in \(R_L\) from 140 Ω to 230 Ω at instant \(t_1\) and vice versa at instant \(t_2\). X-scale: 25 ms/div.

Fig. 3.24 Measured (open circles) and predicted (dashed curve) rms value of \(i_{Lp}\). Experimental efficiency is shown by solid circles.

Fig. 3.25 Half-bridge type-II RIC.

Fig. 3.26 Idealized waveforms at the input and output port of the RIN.

Fig. 3.27 Proposed topological extension of a half-bridge Type-II RIC with clamp diode for in-built CCCV characteristics.

Fig. 3.28 Half-bridge Type-II RIC with tertiary winding and clamp diodes.

Fig. 3.29 (a) Topological variant of a half-bridge Type-II RIC allowing variable CV-limit. The CV-limit is changed by changing the value of \(V_{aux}\). (b) Possible practical realization of \(V_{aux}\) using a class-B chopper.

Fig. 3.30 Prototype half-bridge LCL-T RC with clamp diodes.

Fig. 3.31 Circuit waveforms of prototype LCL-T RC with clamp diodes for operation with (a) \(R_L=200\ \Omega\), (b) \(R_L=500\ \Omega\) and (c) \(R_L=1000\ \Omega\). Legends: (1) \(v_{in}\), 50 V/div. (2) \(v_{pri}\), 50 V/div. (3) \(i_L\), 10 A/div. (4) \((i_{Dc1}-i_{Dc2})\), 10 A/div. X-scale: 2.5 µs/div.

Fig. 3.32 Experimental characteristics (a) \(I_o\) and \(V_o\) as a function of change in \(R_L\). Legends: -□- : \(I_o\), -■-: \(V_o\). (b) \(I_o\)-\(V_o\) plot with \(R_L\) as the running parameter. Solid curve with marker shows the experimentally measured characteristics and the dashed curve shows the characteristics of an ideal CCCV power supply.
Fig. 3.33  Output power and efficiency of experimental converter as a function of $R_L$. Legends: -□- : Efficiency , -■-: Output power (W)

Fig. 3.34  Generic waveform for the rectified output current, $i_r$, and the current drawn from the input dc source, $i_d$.

Fig. 3.35  Experimental waveform (1 A/div, 2.5 μs/div) and frequency spectrum (10 db/div, 125 Hz/div) of (a) $i_r$ and (b) $i_d$ in Topology T3.

Fig. 3.36  Computed and measured dominant harmonics of (a) $i_r$ and (b) $i_d$ in Topology T3.

Fig. 3.37  Conducted EMI along with CISPR 11 limit lines: (a) complete spectrum and (b) spectrum details between 100 kHz and 1 MHz.

Fig. 3.38  Parallel operation of Type-II RICs.

Fig. 3.39  Ripple reduction in the output current of (a) two paralleled Type-II RICs operating with $\theta=90^\circ$ and (b) three paralleled Type-II RICs operating with $\theta=120^\circ$

Fig. 3.40  Peak-peak ripple in the rectified output current normalized to its average value as a function of $\theta$ in multiphase Type-II RICs.

Fig. 3.41  Simulation results of topology T3. (a) Waveforms of rectified output currents of the three modules and the total current, (b) their spectrum (dashed curve for output current of individual module and continuous curve for total current) and (c) waveform of the current at the output of MOSFET bridge.

Fig. 4.1  Circuit diagrams of (a) Half-bridge and (b) full-bridge LCL-T RC.

Fig. 4.2  Idealized waveforms of gate pulses for the switches and $v_{in}$ with APWM control. The switches mentioned in the bracket correspond to the full-bridge converter.

Fig. 4.3  Equivalent circuit diagram of LCL-T RC.
| Fig. 4.4 | Steady-state waveforms of $v_{in}$ and $i_{L1}$ in Mode-I operation. | 113 |
| Fig. 4.5 | Steady-state waveforms of $v_{in}$ and $i_{L1}$ in Mode-II operation. | 114 |
| Fig. 4.6 | Steady-state waveforms of $v_{in}$ and $i_{L1}$ in Mode-III operation. | 115 |
| Fig. 4.7 | Steady-state waveforms of $v_{in}$ and $i_{L1}$ in Mode-IV operation. | 116 |
| Fig. 4.8 | Waveforms of $v_{in}$ and $i_{L1}$ in steady-state as the converter makes transition from one mode into another. Boundary between (a) Mode-I and Mode-IV, (b) Mode-II and Mode-IV, (c) Mode-III and Mode-IV and (d) Mode-I and Mode-III. | 118 |
| Fig. 4.9 | $D$-$Q$ plane of APWM controlled LCL-T RC showing the regions of different modes of operation. | 119 |
| Fig. 4.10 | Variation of $\phi$ as a function of $Q$ for operation at $D=0.5$ in APWM controlled LCL-T RC. | 119 |
| Fig. 4.11 | Regions of ZVS operation of all the switches in LCL-T RC with APWM (solid line) and CM control (broken line). | 120 |
| Fig. 4.12 | Experimental waveforms of $v_{in}$ [trace (1), 20 V/div] and $i_{L1}$ [trace (2), 0.5 A/div in (a), (c) and 1 A/div in (b), (d)] in APWM controlled LCL-T RC (a) Mode-I ($D=0.5$, $Q=1.2$), (b) Mode-II ($D=0.5$, $Q=0.3$), (c) Mode-III ($D=0.2$, $Q=1.2$) and (d) Mode-IV ($D=0.4$, $Q=0.6$). X-scale: 2.5 $\mu$s/div. | 123 |
| Fig. 4.13 | Experimental waveforms of $v_{in}$ [trace (1), 100 V/div] and $i_{L1}$ [trace (2), 5 A/div] at $Q=1.2$. (a) Mode-I ($D=0.5$) and (b) Mode-III ($D=0.2$). X-scale: 2.5 $\mu$s/div. | 124 |

| Fig. 4.15 | Experimental efficiency of APWM controlled LCL-T RC. | 125 |
| Fig. 5.1 | Small-signal input voltage-to-output current transfer function for topology $T_1$, $LA_2$ and $T_3$ obtained from envelop-simulation method. Component values used for simulation are given in table 5.1. | 128 |
| Fig. 5.2 | Equivalent circuit representation of Type-II RIN. | 128 |
| Fig. 5.3 | Block diagram of a voltage-source Type-II RIC. | 129 |
Fig. 5.4  Idealized circuit operating waveforms at the input and output port of the shaded portion of the block diagram.

Fig. 5.5  Equivalent circuit model of (a) shaded portion of the block diagram of Fig. 5.2 and (b) Type-II RIC.

Fig. 5.6  Small-signal ac equivalent circuit model of (a) shaded portion of the block diagram of Fig. 5.2 and (b) Type-II RIC.

Fig. 5.7  Response of Topology T3 to step change in input dc voltage. (a) Predicted average response from the equivalent circuit model. Top trace: \( \langle v_d \rangle_T \), dotted trace: \( \langle i_r \rangle_T \) and continuous trace: \( \langle i_o \rangle_T \). (b) Results of cycle-by-cycle simulation. (c) Experimental results. In (b) and (c), the waveform at the top shows \( v_d(t) \), the envelope shows \( i_r(t) \) and the trace at the bottom shows \( i_o(t) \).

Fig. 5.8  Response of Topology T3 to step change in \( R_L \). (a) Predicted average response from the equivalent circuit model. Top trace: \( \langle v_o \rangle_T \), dotted trace: \( \langle i_r \rangle_T \) and continuous trace: \( \langle i_o \rangle_T \). (b) Results of cycle-by-cycle simulation. (c) Experimental results. In (b) and (c), the waveform at the top shows \( v_o(t) \), the envelope shows \( i_r(t) \) and the trace at the bottom shows \( i_o(t) \).

Fig. 5.9  Response of Topology T3 to sinusoidal perturbations in dc voltage. (a1)-(a3): 10 Hz, (b1)-(b3): 100 Hz and (c1)-(c3): 1000 Hz. Parts (a1), (b1) and (c1) show the predicted average response from the equivalent circuit model [Top trace: \( \langle v_d \rangle_T \), dotted trace: \( \langle i_r \rangle_T \) and continuous trace: \( \langle i_o \rangle_T \)]. Parts (a2), (b2) and (c2) show the results of cycle-by-cycle simulation. Parts (a3), (b3) and (c3) show the experimental results. In (b2)-(b3) and (c2)-(c3), the waveform at the top shows \( v_d(t) \), the envelope shows \( i_r(t) \) and the trace at the bottom shows \( i_o(t) \).

Fig. 5.10  Simulated response of Topology T3 to sinusoidal perturbations
in dc voltage at (a) 10 kHz and (b) 50 kHz. Waveform from
top to bottom: \(v_d(t), i_r(t)\) and \(i_o(t)\).

Fig. 5.10  Theoretical and experimental line-to-output small-signal
transfer function of Topology T3.

Fig. 6.1  Circuit diagram of half-bridge LCL-T RC. Transformer \(L_{lk}\)
and \(C_w\) are shown explicitly inside the shaded area.

Fig. 6.2  (a) Equivalent circuit diagram of the output stage of LCL-T
RC and (b) its waveforms for analysis of the effect of \(C_w\).

Fig. 6.3  Effect of \(C_w\) on the current gain of LCL-T RC. (a) Variation
of \(H\) as a function of \(Q\). (b) Variation of \(H\) as a function of \(\psi\)
at \(Q=Q_{opt}\). Markers show the data points obtained from
simulation.

Fig. 6.4  Plot of ratio \((H'/H)\) as a function of \((\psi\sigma/Q)\) showing the
effect of manufacturing tolerances in \(C_w\) on the current gain of
LC-LC RC at \(\omega_n=1\).

Fig. 6.5  Photograph of the experimental prototype HV power supply.

Fig. 6.6  Output characteristic of open-loop LCL-T RC (___) and
LC-LC RC (___) with \(C_w\).

Fig. 6.7  Waveforms of transformer primary voltage (Ref A, 50V/div)
and secondary current (Ref B, 100 mA/div) in LCL-T RC at
\(R_L=20\ k\Omega\). X-scale: 2.5 \(\mu\)s/div.

Fig. 6.8  Waveforms of transformer primary voltage (Ref A, 50V/div)
and secondary current (Ref B, 100 mA/div) in LCL-T RC at
\(R_L=5\ k\Omega\). X-scale: 2.5 \(\mu\)s/div.

Fig. 6.9  Waveforms of bridge output voltage [trace (1), 50 V/div] and
current [trace (2), 2 A/div] in LC-LC RC with (a) \(R_L=20\ k\Omega\),
and, (b) \(R_L=1\ k\Omega\). X-scale: 2.5 \(\mu\)s/div.

Fig. 6.10  Experimental efficiency of LCL-T RC (___) and LC-LC
RC (___).

Fig. 6.11  Typical charge – discharge cycle of a CCPS

Fig. 6.12  Circuit diagram of LCL-T half-bridge RC with clamp diodes
as a CCPS.

Fig. 6.13  Circuit waveforms of experimental prototype CCPS during charging and refresh mode of the charging cycle. Legends: (1) Output voltage, $V_o$, 500 V/div. (2) Current in resonant inductor $L$, $i_{L1}$, 10 A/div. (3) Transformer primary current, 10 A/div. (4) Clamp diode current, $i_{Dc1}$-$i_{Dc2}$, 10 A/div. X-scale: 250 µs/div.

Fig. 6.14  Magnified waveforms of $V_o$ and $i_{L1}$ at the commencement of (a) charging mode (details around $t=t_1$ of Fig. 6.11) and (b) discharge cycle (details around $t=t_3$ of Fig. 6.11). Legends: (1) $V_o$, 100 V/div. (2) $i_{L1}$, 2 A/div. X-scale: 100 µs/div

Fig. 6.15  Circuit diagram of Type-II RIC with clamp diodes used as a CC charger for ultracapacitor.

Fig. 6.16  Circuit diagram of CC charger for ultracapacitor showing $L_{lk}$ explicitly.

Fig. 6.17  Simulated waveforms: (1) primary current, (2) $v_{pri}$ when $L_{lk}$ is insignificant and (3) $v_{pri}$ when $L_{lk}$ is 0.3 times the value of resonant inductor.

Fig. 6.18  Simulated waveforms of $v_{pri}$ (upper plot), the current in $D_{C1}$ (middle plot) and the voltage across output capacitor (lower plot) when (a) $L_{lk}$ is insignificant and (b) $L_{lk}$ is 0.3 times the value of resonant inductor.

Fig. 6.19  Photographs showing the charger for ultracapacitor.

Fig. 6.20  Experimental waveforms of capacitor voltage (upper trace, 5 V/div) and charging current (lower trace, 5 A/div) with (a) clamp diodes and (b) without clamp diodes showing the effect of pre-mature clamping. X-scale: 10 sec/div.

Fig. 6.21  Charging cycle of ultracapacitor showing capacitor voltage [(1), 5 V/div] and charging current [(2), 5 A/div] when two chargers are operating in parallel. (3) and (4) respectively show these waveforms with one charger. X-scale: 10 sec/div.
