LIST OF TABLES

Table 4-1: Comparison of demographic aspects of Udupi district with surrounding districts. .................................................................................................................................................................................. 46

Table 5-1: Index and their characteristics for axial link index ........................................ 70
Table 5-2: Index and their characteristics for convex space adjacency ....................... 72
Table 5-3: Index and their characteristics for depth .................................................... 75
Table 5-4: Index and their characteristics for axial connectivity .................................. 77
Table 5-5: Index and their characteristics for axial space ........................................... 79
Table 5-6: Index and their characteristics for building space ..................................... 82
Table 5-7: Index and their characteristics for depth from building entrance ............. 85
Table 5-8: Index and their characteristics for axial link of four towns ...................... 92
Table 5-9: Index and their characteristics for convex space of four towns ............. 94
Table 5-10: Index and their characteristics for index of depth of four towns .......... 96
Table 5-11: Index and their characteristics for axial connectivity of four towns ...... 99
Table 5-12: Index and their characteristics for axial space of four towns ............. 101
Table 5-13: Index and their characteristics for building space of four towns ........ 104
Table 5-14: Index and their characteristics for depth from building entrance of four towns .................................................................................................................................................................................. 106

Table 5-15: Popular routes in Barkur derived from axial connectivity, axial link and index of depth .................................................................................................................................................................................. 108

Table 5-16: Popular routes in Brahmavara derived from axial connectivity, axial link and index of depth .................................................................................................................................................................................. 109
Table 5-17: Popular routes in Basrur derived from axial connectivity, axial link and index of depth ................................................................................................................................. 110

Table 5-18: Popular routes in Udupi derived from axial connectivity, axial link and index of depth ................................................................................................................................. 111

Table 5-19: Important nodes for Basrur derived from axial space, convex space adjacency and axial link index ................................................................................................................................. 118

Table 5-20: Important nodes for Brahmanvara derived from axial space, convex space adjacency and axial link index ................................................................................................................................. 119

Table 5-21: Important nodes for Udupi derived from axial space, convex space adjacency and axial link index ................................................................................................................................. 120

Table 6-1: Table showing how the calculation for points for accuracy was done for the examples .............................................................................................................................................. 131

Table 6-2: Table showing the level of accuracy scores in each category for sketch map .............................................................................................................................................. 132

Table 6-3: Table showing number of places identified in each category in sketch plan .............................................................................................................................................. 132

Table 6-4: Identification of landmarks as per sketch map- overall, as per age group, as per place of residence, as per familiarity of town .............................................................................................................................................. 133

Table 6-5: Identification of nodes, boundaries and districts- overall, as per age group, as per location of residence, as per familiarity of town .............................................................................................................................................. 134

Table 6-6: table showing the number and accuracy of places and routes identified in verbal description survey .............................................................................................................................................. 141

Table 6-7: performance of people in each parameter in photo identification survey .............................................................................................................................................. 146
