I CHAPTER

INTRODUCTION
1.1 GENERAL REMARKS
1.2 SCATTERING THEORY
   1.2.1 Eigen function Expansion Method
   1.2.2 Partial Wave Analysis
   1.2.3 Optical Model Potential and Projection Operator
1.3 SPIN POLARIZATION
   1.3.1 Spin Orbit Interaction
   1.3.2 Electron Exchange
   1.3.3 Polarized Electron beam
   1.3.4 Fine Structure Effect
1.4 RELATIVISTIC DIRAC EQUATION
   1.4.1 Asymptotic Solutions
   1.4.2 Radial Dirac Equations
1.5 DESCRIPTION OF TARGET WAVE FUNCTIONS
1.6 HARTREE - FOCK - THEORY
1.7 PLAN OF THESIS

II CHAPTER

STUDY OF SPIN POLARIZATION AND CROSS-SECTION FOR ELECTRON ELASTICALLY SCATTERED FROM Rhenium AND Gold Atoms

2.1 INTRODUCTION
2.2 THEORETICAL METHODOLOGY
2.3 CHOICE OF POTENTIALS
   2.3.1 Static Potential
   2.3.2 Polarization Potential
   2.3.3 Exchange Potential
   2.3.4 Absorption Potential
2.4 RESULTS AND DISCUSSIONS
   2.4.1 Electron Scattering From Rhenium Atoms
      2.4.1.1 Radial Shapes
      2.4.1.2 Angle-Integrated Elastic Cross-Sections and
      Contribution of Partial Waves at low Energy (E < 10 eV)
      2.4.1.3 Differential Cross-Sections and Asymmetry Parameter
      2.4.1.4 Elastic, Total and Momentum-Transfer Cross-Sections
   2.4.2 Electron Scattering From Gold Atoms
      2.4.2.1 Radial Shapes
      2.4.2.2 Angle-Integrated Elastic Cross-Sections and
      Contribution of Partial Waves at low Energy (E < 10 eV)
      2.4.2.3 Differential Cross-Sections and Asymmetry Parameter
      2.4.2.4 Elastic, Total and Momentum-Transfer Cross-Sections
2.5 CONCLUSION
CHAPTER 3
SPIN POLARIZATION PARAMETER AND CROSS-SECTIONS FOR POSITRON ELASTICALLY SCATTERED FROM RHENIUM, GOLD, RADIUM AND RADON ATOMS

3.1 INTRODUCTION
3.2 THEORETICAL METHODOLOGY
   3.2.1 The Static Potential
   3.2.2 Positron -Correlation Polarization Potential
   3.2.3 Positron - Absorption Potential
3.3 RESULTS AND DISCUSSIONS
   3.3.1 Positron Scattering From Rhenium Atoms
      3.3.1.1 Angle- Integrated Elastic Cross-Sections and
              Contribution of Partial Waves at low Energy (E < 10 eV
      3.3.1.2 Differential Cross-Sections and Asymmetry Parameter
      3.3.1.3 Elastic, Total and Momentum-Transfer Cross- Sections
   3.3.2 Positron Scattering From Gold Atoms
      3.3.2.1 Angle- Integrated Elastic Cross-Sections and
              Contribution of Partial Waves at low Energy (E < 10 eV
      3.3.2.2 Differential Cross-Sections and Asymmetry Parameter
      3.3.2.3 Elastic, Total and Momentum-Transfer Cross- Sections
   3.3.3 Positron Scattering From Radon and Radium Atoms
      3.3.3.1 Angle- Integrated Elastic Cross-Sections and
              Contribution of Partial Waves at low Energy (E < 10 eV
      3.3.3.2 Differential Cross-Sections and Asymmetry Parameter
      3.3.3.3 Elastic, Total and Momentum-Transfer Cross- Sections
3.4 CONCLUSION

CHAPTER 4
CROSS-SECTIONS AND SPIN POLARIZATION PARAMETER FORELECTRONS ELASTICALLY SCATTERED FROM ETHANE MOLECULES

4.1 INTRODUCTION
4.2 THEORETICAL METHODOLOGY
4.3 RESULTS AND DISCUSSIONS
4.4 CONCLUSIONS

CHAPTER 5
STUDY OF INELASTIC PROCESS FOR TWO ELECTRON SYSTEMS

5.1 GENERAL REMARKS
5.2 SINGLE IONIZATION (DEFINATIONS AND NOTATIONS)
5.3 THEORETICAL METHODOLOGY
5.4 RESULTS AND DISCUSSIONS
5.5 CONCLUSION

CHAPTER VI
SUMMARY CONCLUSION AND COMMENTS

APPENDIX

1- IV
