List of Figures

1.1 Collagen content represented in blue shades ........................................ 7

3.1 Pictorial representation of HSI color model ........................................ 32

3.2 Flowchart of the proposed algorithm ...................................................... 34

3.3 Changes of color score with $H_c$ and $H_w$ ........................................... 34

3.4 Flowchart of working of TissueQuant tool .............................................. 36

3.5 Screenshot of TissueQuant software ...................................................... 37

3.6 Screenshot for ‘Batch Process’ option .................................................... 38

3.7 Screenshot of ‘resultsScore.xls’ file ...................................................... 39

3.8 Image of irregularly shaped objects ....................................................... 40

3.9 Variation of color scores for different color settings .................................... 42

3.10 Screenshot of Adobe Photoshop software for color analysis ....................... 42

3.11 Screenshot of TissueQuant software for color analysis ............................. 43

3.12 Performance comparison of TissueQuant software with Adobe Photoshop ...... 43

3.13 Selection of various color shades using TissueQuant and Adobe Photoshop ... 45

4.1 Screenshot of TissueQuant analysis of the TRAP stained image .................... 52

4.2 ALP staining intensity quantification ...................................................... 52

4.3 TRAP staining intensity quantification .................................................... 53

4.4 Plot of color scores of ALP stained section images .................................... 53

4.5 Plot of color scores of TRAP stained section images .................................. 54
5.1 Images representing negative, weak positive and strong positive cases . 59
5.2 Screenshot of the software for analysis of the image . . . . . . . . . . . 60
5.3 Results of the classification of ER expression images . . . . . . . . . . . 62
5.4 Different components of a Giemsa stained thin blood smear . . . . . . . 72
5.5 Flowchart of the proposed algorithm . . . . . . . . . . . . . . . . . . . 76
5.6 Results of various steps of the algorithm . . . . . . . . . . . . . . . . . 80
5.7 Classification parameters from the training set . . . . . . . . . . . . . . 81
5.8 Screenshot of the android application showing the subimages . . . . . . 82
5.9 Screenshot of the android application showing the selected subimage . . 83
5.10 Screenshot of the android application showing the prescription form . . 83
6.1 Screenshot of selection of contours marking the fascicles . . . . . . . . . . 93
6.2 Screenshot of selection of outer contour of the nerve . . . . . . . . . . . 94
6.3 Screenshot of the analysis of sympathetic fibers . . . . . . . . . . . . . 95
6.4 The different nerve components identified by the tool . . . . . . . . . . . 95
6.5 Identification of nerve and fascicle areas for the nerves . . . . . . . . . . 97
6.6 Plot of sympathetic indices of nerves . . . . . . . . . . . . . . . . . . . . 98
6.7 Plot of age versus FAT in RN . . . . . . . . . . . . . . . . . . . . . . . 98
6.8 Plot of age versus FAT in SBRN . . . . . . . . . . . . . . . . . . . . . 99
6.9 Plot of age versus FAT in LCNF . . . . . . . . . . . . . . . . . . . . . 99
6.10 Plot of age versus FAT in AMACN . . . . . . . . . . . . . . . . . . . . 99
6.11 Variation in staining and illumination . . . . . . . . . . . . . . . . . . . 102
