**LIST OF FIGURES**

1.1 Classification of antibiotics .................................................................................24
1.2 Overview of Mechanism of β- lactam antibiotics .................................................27
1.3 Labtronic Double Beam Spectrophotometer .........................................................31
1.4 Schematic diagram of UV Double Beam Spectrophotometer .........................36
1.5 HPLC Instrument ......................................................................................43
1.6 Schematic diagram of types of HPLC ................................................................46
1.7 Labtronic HPLC (Model 3201) .........................................................................47
1.8 Method Development Chart .................................................................................49
1.9 The Theoretical Plate Exemplary of Chromatography ......................................53
1.10 A plot of plate height vs. average linear of M. Phase’ velocity 35
1.11 Allergic reactions of beta lactum antibiotics .....................................................73
3.1 Sampling on HPLC .........................................................................................133
3.2 Accessories for preparing HPLC Sample ..............................................................133
3.3 Sampling on Double Beam Spectrophotometer ..................................................134
3.4 IR-Spectra of Ceftriaxone sodium ....................................................................137
3.5: UV Spectrum of Ceftriaxone sodium ...............................................................139
3.6: Chromatogram of ceftriaxone sodium at pH 6.5 ..............................................142
3.7: Chromatogram of ceftriaxone sodium in Hypersil BDS C\textsubscript{18} column 144
3.8: Chromatogram of acid (0.1NHCL) degraded preparation (API) .....................168
3.9: Chromatogram of Base (0.1NAOH) degraded preparation (API) .................169
3.10 Chromatogram of oxidative (5%) degraded preparation (API) .......................170
3.11 Chromatogram of thermal degraded preparation (API) ....................................171
3.12: The chromatogram of standard preparation ..................................................174
3.13: Peak purity spectra of Ceftriaxone sodium depicting its purity .....................176
3.14: Chromatogram of specificity showing sample spiked with impurity...177
3.15: Linearity plots for Ceftriaxone sodium.................................183
3.16UV Spectrum of 12 µg/ml of Ceftriaxone sodium Standard Solution (λ_{max} 260nm).................................................................192
3.17Linear Calibration Curve for Ceftriaxone sodium......................193
3.18Chemical structure of Cefpodoxime Proetil ............................200
3.19Method validation chromatograms of Cefpodoxime proetil........208
3.20Tablet solution chromatogram.............................................209
3.21 Blank Solution Chromatogram.............................................209
3.22Alkali hydrolysis blank chromatogram .................................210
3.23Alkali hydrolysis degradation of tablet chromatogram..............210
3.24Oxidative blank chromatogram...........................................211
3.25Oxidative degradation of tablet chromatogram.........................211
3.26Acid hydrolysis blank chromatogram ....................................212
3.27: Acid hydrolysis degradation of tablet chromatogram...............212
3.28: Thermal degradation of tablet chromatogram........................213
3.29: UV short degradation of tablet chromatogram.......................213
3.30: UV short degradation of tablet chromatogram......................214
3.31: Cefpodoxime peak purity spectra in base hydrolysis degradation...214
3.32: Cefpodoxime peak purity spectra in oxidation degradation........215
3.33Cefpodoxime peak purity spectra in acid hydrolysis degradation...215
3.34: Cefpodoxime peak purity spectra in thermal degradation.........216
3.35:Cefpodoxime peak purity spectra in UV short degradation........216
3.36Cefpodoxime peak purity spectra in UV-long degradation ..........217
3.37Chemical structure of Cefotaxime Sodium ..............................221
3.63: Oxidative degradation of tablet ............................................. 241
3.64: Thermal degradation of tablet chromatogram ....................... 241
3.65: Blank for acidic degradation ................................................. 242
3.66: Acidic degradation of tablet chromatogram ......................... 242
3.67: Chemical structure of Cefperazone ..................................... 246
3.57: Tablet sample solution chromatogram .................................. 248
3.58: Diluent chromatogram ......................................................... 248
3.59: Standard solution chromatogram ......................................... 249
3.60: Blank alkali hydrolysis chromatogram ................................. 249
3.61: Alkali hydrolysis degradation of tablet chromatogram ........... 250
3.62: Blank for oxidative degradation ............................................ 250
3.63: Oxidative degradation of tablet ............................................ 251
3.64: Thermal degradation of tablet chromatogram ....................... 251
3.65: Blank for acidic degradation ................................................. 252
3.66: Acidic degradation of tablet chromatogram ......................... 252
