ACKNOWLEDGEMENT

I deem it my privilege to acknowledge with gratitude the invaluable guidance and inspiration given to me by my esteemed teacher and supervisor Professor S. Sultan Akhtar. Inspite of his very busy schedule he was kind enough to spare time so as to supervise my work. His valuable suggestions, analytical approach and critical evaluation have been indispensable in the completion of the present work.

I am also grateful to Professor Afazal Kureshi, Chairman, Department of Psychology, for providing all the necessary facilities for research in the Department.

Words are inadequate in expressing my thankfulness to Professor (Mrs.) Hamida Ahmad for her very helpful and benign attitude and sincere concern. Despite her heavy personal and academic engagements, she very kindly spared her precious time to go through the final draft and provided valuable suggestions.

My thanks are also due to my colleagues Mr. Amirul Hasan Ansari, Miss Harsh Taluja and Miss Rama Sharma for their help and cooperation during the data collection phase.

I wish to express my thanks to Mr. Ashfaq Ahmad, Senior Computer Programmer, for helping me with statistical analysis.
Of course, my deep-seated gratitude shall always be there for my parents whose encouragement and affection were the key to crown the work success.

I sincerely appreciate the keen interest shown in my work by my husband Mr. Pratap Singh Gupta. I have no words to express how the encouragement and cooperation he extended to me at the cost of inconvenience to his own self has affected me. Together with helping me in my work, his attitude helped me to experience a deep sense of fulfilment and optimism, because it was a beautiful example of understanding and companionship.

Last but not the least, thanks are also due to Mr. Suhail Ahmad (M/s Micro Services Centre) for painstaking care in wordprocessing the manuscript.
