ACKNOWLEDGEMENT

I am indebted to my teacher and Supervisor, Professor (Mrs.) K.S. Khan, for affectionate encouragement, expert advice and searching criticism throughout the completion of this work. She has always been a source of inspiration and unfailing support, which encouraged me to continue the work even under odd circumstances. In spite her busy schedule in and outside Aligarh, she gave me the liberty of encroachment on her valuable time. Without her unfailing support, the present work would have not been completed in the present form.

In the course of this work I received many helpful comments and suggestions from my colleagues and friends, to whom I owe a special debt of gratitude. A special note of thanks is due to Professor K.L. Krishna and Professor V. Pandit, Delhi School of Economics, with whom I had fruitful discussions which helped me to crystalize my ideas.

My thanks are due to the staff of Maulana Azad Library, Aligarh Muslim University, Aligarh; Seminar Library, Department of Economics, A.M.U., Aligarh; Ratan Tata Library, Delhi School of Economics, and National Library, Calcutta for their valuable cooperation.
I am grateful to Mr. Rahim and Mr. Mohd. Afzal for being kind enough to do the computational work in spite of their busy schedule.

Last, but not the least, my thanks are due to Messrs Mashhood Alam Raz and Waqar Husain who typed the manuscript.

\[N\cdot A\cdot \text{ Khan}\]

NISAR AHMAD KHAN
