LIST OF TABLES

Table 2.1 : The Nutritional and antinutritional aspects of cereals and pulses commonly consumed in India. 2.6
Table 2.2 : Some popular traditional cereal-pulse based foods of India and neighbouring countries. 2.14
Table 2.3 : Analysis of selected Handwa recipes. 2.17
Table 2.4 : Selected examples of foods obtained through fermentation. 2.21
Table 2.5 : Analysis of ready-mix for handwa. 2.45
Table 5.1.1 : Cereal-pulse mixes used for handwa preparation. 5.8
Table 5.2.1 : Effect of using par-boiled rice V/s ordinary rice on handwa quality 5.25
Table 5.2.2 : Sensory qualities and specific volume of handwas baked in sand bath and handwa oven. 5.30
Table 5.2.3 : Grinding and sieving of different ingredients of handwa mix. 5.32
Table 5.2.4 : Effect of mix composition on handwa quality 5.38
Table 5.2.5 : Correlation coefficient between the sensory qualities and titratable acidity. 5.47
Table 5.2.6 : Gross composition, titratable acidity and pH of standard handwa. 5.51
Table 5.2.7 : Mean microbial count of handwas stored at ambient and refrigerated conditions. 5.56
Table 5.3.1 : Effect of incorporating maize, pearl millet, sorghum and wheat on pH of handwa batters. 5.61
Table 5.3.2 : Effect of incorporating maize, pearl millet, sorghum and wheat on yield and specific volume of handwas. 5.62
Table 5.3.2.1: Effect of combining wheat and jowar on handwa quality 5.68
Table 5.3.3 : Effect of incorporating black gram, green gram, lentil, val, moth beans and peas on pH of handwa batters

Table 5.3.4 : Effect of incorporating black gram, green gram, lentil, val, moth beans and peas on yield and specific volume of handwa batters

Table 5.3.5 : Effect of using germinated pulse powders on handwa quality

Table 5.3.6 : Effect of using vegetables such as beans and okra on handwa quality

Table 5.3.7 : Effect of giving different treatments to bottle gourd vegetable on handwa quality

Table 5.3.8 : Effect of using microwave and solar ovens on handwa quality

Table 5.3.9 : Effect of steaming cum baking operations on handwa quality

Table 5.3.10 : Effect of adding various acidulants in R-B handwa mixes on handwa quality

Table 5.3.11 : Effect of using baking powder in R-B mixes in various forms on handwa quality

Table 5.3.12 : Effect of storage on microbial quality of ready-to-bake mixes.

Table 5.4.1a : Percent difference in nutrient content of standard and balanced mix formulations with reference RDA

Table 5.4.1b : Compositional aspects of standard and balanced formulations

Table 5.4.2 : Effect of handwa making with balanced handwa formulations on handwa quality

Table 5.4.3 : Ingredients used per 100 g popular, balanced and blended handwa mixes.
