LIST OF APPENDIX

9.2.1.1 Recipes for handwa compiled from cook books
9.4.1.1 Questionnaire used for the survey
9.4.1.2 Score card for evaluating the handwa sample
9.4.1.3 Computer programme for evaluating the handwa sample
9.5.1.1 Frequency of handwa consumption
9.5.1.2 Consumption of handwa as major or minor meal
9.5.1.3 Temperature preference for consuming handwa
9.5.1.4 Items taken along with handwa
9.5.1.5 Use of purchased and homemade mixes
9.5.1.6 Specific ingredients of home made mixes
9.5.1.7 Fermentation of handwa batter mix
9.5.1.8 Fermentation period used for the batters
9.5.1.9 Care taken during winters for fermentation
9.5.1.10 Addition of oil to handwa batter
9.5.1.11 Addition of sugar to handwa batter
9.5.1.12 Addition of vegetables to handwa batter
9.5.1.13 Amount of vegetables added to handwa batter
9.5.1.14 Type of vegetables added to handwa batter
9.5.1.15 Baking facilities used for handwa making
9.5.1.16 End point indicators used for baked handwa
9.5.1.17 Storage practices for left-over handwa
9.5.1.18 Reheating of stored handwa
9.5.1.19 Shelf-life of handwa during summers
9.5.1.20 Spoilage indicators of handwa
9.5.1.21 Attributes of good handwa
9.5.1.22 Preferred flavours in handwa

9.5.1.23 Preference for purchasing handwa

9.5.2.1 Time temperature changes in handwa oven during baking in handwa oven

9.5.2.2 Time temperature changes in handwa oven during baking in sand bath

9.5.2.3 Effect of mix particle size on qualities of handwa

9.5.2.4 Linear correlation between the mix mesh size and the specific volume and sensory qualities of handwas prepared from it.

9.5.2.5 ANOVA table for sensory qualities of handwas with varying mesh size.

9.5.2.6 Effect of batter moisture levels on handwa quality

9.5.2.7 Linear correlations between sensory attributes, bulk density, specific volume and moisture percent of handwa with varying batter moisture levels

9.5.2.8 Effect of fermentation period on handwa quality

9.5.2.9 Mean TA (Titratable acidity) of handwa batters fermented for varying time period using 3 levels of inoculum.

9.5.2.10 Effect of room temperature storage on moisture changes and sensory qualities of standard handwa.

9.5.2.11 Effect of refrigerated storage on moisture changes and sensory qualities of standard handwa.

9.5.3.1 Effect of substituting rice with wheat, bajra, maize and jowar on handwa quality

9.5.3.2 Effect of substituting Red gram dal and Bengal gram dal with green gram dal, black gram dal, val, lentil, peas and moth beans on handwa quality

9.5.3.3 Effect of storage of the ready-to-bake mixes on moisture content, free fatty acid and peroxide values

9.5.3.4 Effect of storage of the ready-to-bake mixes on Specific volume & sensory qualities of handwas prepared from them

9.5.4.1 Nutritionally balanced handwa mixes formulated for an adult man & woman, adolescent boys, school goers (4-7 yrs, 7-9 yrs) and preschoolers (3-6 yrs).
9.5.4.2 Effect of modifying the balanced handwa mix for an adult man on the sensory qualities of handwas

9.5.4.3 Effect of modifying the balanced handwa mix for adolescent boys on the sensory qualities of handwas

9.5.4.4 Effect of modifying the balanced handwa mix for school goers (7-9 yrs) on the sensory qualities of handwas

9.5.4.5 Percent excess/deficit of RDA for various nutrients in the popular, balanced and blend of handwa mix formulations for school age children, adolescent boys and adult men
