ACKNOWLEDGEMENTS ............................................. 1
ABSTRACT ....................................................... 1
1 INTRODUCTION .................................................. 6
  1.1 WHY RUBBER WOOD? ........................................ 7
  1.2 NATURE OF THE PROBLEM .................................. 9
    1.2.1 Biodegradation ....................................... 10
    1.2.2 Natural durability .................................... 10
  1.3 OBJECTIVES OF THE STUDY ................................ 11

2 REVIEW OF LITERATURE ...................................... 13
  2.1 BIODEGRADATION .......................................... 14
  2.2 PROPHYLACTIC TREATMENTS ................................ 16
  2.3 SAPSTAIN CONTROL ........................................ 17
  2.4 BORON DIFFUSION TREATMENT .............................. 19
  2.5 VACUUM-PRESSURE IMPREGNATION (VPI)
    TREATMENT .................................................... 22
    2.5.1 Boron impregnation treatment ......................... 22
    2.5.2 CCA impregnation treatment ............................ 24
    2.5.3 Impregnation treatment with other chemicals .......... 25
  2.6 METHOD OF STORAGE ....................................... 26
  2.7 CHEMICAL MODIFICATION .................................. 27
    2.7.1 Acetylation ........................................... 27
    2.7.2 Acetylation procedures ................................ 28
    2.7.3 Biological resistance ................................ 29
    2.7.4 Dimensional stabilization ............................. 30
    2.7.5 Physical and mechanical properties .................... 30
    2.7.6 Weathering properties ................................ 32
    2.7.7 Acetylation of rubber wood ......................... 32

3 MATERIALS AND METHODS .................................... 34
  3.1 BORON DIFFUSION TREATMENT ............................... 34
3.1.1 Effect of diffusion storage period
3.1.2 Effect of surface area per unit volume
3.1.3 Effect of dipping duration
3.1.4 Variation of solution pick-up with concentration

3.2 VACUUM-PRESSURE IMPREGNATION (VPI) TREATMENT
3.2.1 Treatment with boron chemicals
3.2.1.1 Lateral penetration
3.2.2 Treatment with CCA preservative
3.2.3 Determination of penetration of preservatives
3.2.3.1 Penetration of boron
3.2.3.2 Penetration of CCA
3.2.4 Chemical analysis of treated wood
3.2.4.1 Analysis for boron
3.2.4.2 Analysis for CCA
3.2.5 Full scale testing in commercial plants
3.2.5.1 Treatment with boron compounds
3.2.5.2 Treatment with CCA preservative

3.3 DETERMINATION OF PHYSICAL PROPERTIES
3.3.1 Moisture content
3.3.2 Density

3.4 DETERMINATION OF MECHANICAL PROPERTIES
3.4.1 Fibre stress at limit of proportionality (FSLP)
3.4.2 Modulus of rupture (MOR)
3.4.3 Modulus of elasticity (MOE)
3.4.4 Maximum compressive stress (MCS)

3.5 UNDER-WATER STORAGE
3.5.1 Evaluation of physical and mechanical properties of under-water stored rubber wood
3.5.2 Treatability of under-water stored rubber wood

3.6 CHEMICAL MODIFICATION OF RUBBER WOOD
3.6.1 Acetylation technique
3.6.2 Determination of weight percent gain (WPG) of chemicals
3.6.3 Determination of anti-shrink efficiency (ASE) of acetylated rubber wood
3.6.4 Evaluation of physical and mechanical properties of modified rubber wood ........................................ 50

3.7 PREPARATION OF MEDIUM DENSITY FIBRE (MDF) BOARDS FROM ACETYLATED RUBBER WOOD FIBRES 51

3.7.1 Evaluation of physical and mechanical properties and dimensional stability of MDF boards prepared from acetylated rubber wood fibres .................................................. 51

4 RESULTS AND DISCUSSION ................................................. 53

4.1 SPECIFICATIONS FOR DRY SALT RETENTION (DSR) OF PRESERVATIVES IN TREATED WOOD FOR PERISHABLE TIMBERS .......................................................... 53

4.2 BORON DIFFUSION TREATMENT ....................................... 55

4.2.1 Developing simple diffusion treatment with boron chemicals ............................................. 55

4.2.2 Optimum storage period ........................................... 57

4.2.3 Effect of surface area per unit volume ........................................ 60

4.2.4 Effect of treatment duration ........................................ 61

4.2.5 Variation of solution pick-up with concentration ........................................ 63

4.2.6 Summary of diffusion treatment ....................................... 65

4.3 VACUUM-PRESSURE IMPREGNATION (VPI) TREATMENT - PILOT PLANT INVESTIGATIONS ............. 65

4.3.1 Boron impregnation treatment ........................................ 66

4.3.1.1 Effect of varying the initial vacuum period 66

4.3.1.2 Effect of varying the pressure period 67

4.3.1.3 Effect of varying moisture levels and concentration of treatment solution ................. 70

4.3.1.4 Effect of length of samples ........................................ 71

4.3.1.5 Effect of end-sealing ........................................ 71

4.3.2 Chemical analysis of boron impregnated rubber wood .................................................. 73

4.3.3 Re-confirmation trial in pilot-plant ........................................ 76

4.3.3.1 Air-dried wood ........................................ 76

4.3.3.2 Partially dried wood ........................................ 77

4.4 FULL SCALE TESTING OF THE ECONOMICAL SCHEDULE IN COMMERCIAL SCALE PLANTS ......... 78

4.4.1 Air-dried wood ........................................ 78

4.4.2 Partially dried wood - Effect of length of sizes ........................................ 79

4.4.3 Green wood ........................................ 82
4.4.4 Effect of a more intensive initial vacuum on DSR 85
4.4.5 Effect of sample size on DSR ................. 86

4.5 CCA IMPREGNATION TREATMENT .......... 89
4.5.1 Pilot-plant trials .......................... 89
4.5.1.1 Air-dried wood ......................... 89
4.5.1.2 Partially dried wood .................... 92
4.5.2 Full scale testing of CCA impregnation of green rubber wood in commercial scale plants .......... 92
4.5.3 Chemical analysis of CCA treated wood ........ 94
4.5.4 Summary of vacuum-pressure impregnation (VPI) treatment trials .......................... 97

4.6 UNDER-WATER STORAGE ...................... 98
4.6.1 Optimum storage conditions ................ 98
4.6.2 Effect of under-water storage on physical and mechanical properties ......................... 99
4.6.3 Effect of under-water storage on treatability ............. 102
4.6.4 Summary of the effect of under-water storage ........ 107

4.7 CHEMICAL MODIFICATION OF RUBBER WOOD BY ACETYALTION .......................... 107
4.7.1 Effect of treatment conditions on acetyl weight percent gain (WPG) ......................... 107
4.7.2 Dimensional stability of acetylated rubber wood 109
4.7.3 Effect of acetylation on physical and mechanical properties .......................... 110

4.8 PREPARATION OF MEDIUM DENSITY FIBRE (MDF) BOARD FROM ACETYLATED RUBBER WOOD FIBRES 113
4.8.1 Method for acetylating rubber wood fibres and preparation of MDF board ......................... 113
4.8.2 Dimensional stability of acetylated MDF board from rubber wood ......................... 114
4.8.3 Effect of acetylation on the bending strength of MDF board from rubber wood ......................... 115
4.8.4 Summary of the chemical modification of rubber wood ......................... 116

5 CONCLUSIONS ......................... 117
6 REFERENCES ......................... 126
