## CONTENTS

**CHAPTER I**

**INTRODUCTION**

1.1 Microstrip Antennas

1.2 Applications of Microstrip Antennas

1.3 Recent research on Microstrip Antennas

1.4 Objective

1.5 Thesis Organization

1.6 References

**CHAPTER II**

**COMPACT MICROSTRIP ANTENNA**

2.1 Introduction

2.2 Microstrip antenna models for analysis

   2.2.1 Transmission-Line Model

   2.2.2 Cavity model for the rectangular patch

   2.2.3 Cavity model for the radiated field of a rectangular patch

2.3 Compact Microstrip antenna

2.4 Proposed Compact Microstrip antenna

   2.4.1 Antenna design description

   2.4.2 Results and discussion

   2.4.3 Effects of slots L1, L2, L3 on return loss

2.5 Conclusion

2.6 References
CHAPTER III  INVESTIGATIONS ON THE DESIGN OF BROADBAND MONOPOLE MICROSTRIP ANTENNA

3.1 Introduction
3.2 Monopole microstrip antenna
3.3 Cavity-backed slots (dual of a monopole)
3.4 Bandwidth improvement using Monopole antenna
3.5 Recent research on planar rectangular monopole antenna
   3.5.1 Lower Frequency calculations of the Planar Monopole Antennas
3.6 Proposed Rectangular Monopole microstrip antenna for broadband operation
   3.6.1 Results obtained by different parametric investigations
3.7 Conclusion
3.8 References

CHAPTER IV  INVESTIGATION ON THE ULTRAWIDEBAND DESIGN USING MONOPOLE MICROSTRIP ANTENNA

4.1 Introduction
4.2 UWB system characteristics
4.3 UWB Signals and Systems
4.4 Antennas for UWB communications

4.4.1 Proposed Monopole microstrip antenna design for Ultra-Wideband (UWB) characteristics

4.4.2 Observations

4.4.3 Parametric study of proposed antenna

4.5 Conclusion

4.6 References

CHAPTER V EFFECT OF SUBSTRATE DIMENSION ON MICROSTRIP ANTENNA DESIGN 141-158

5.1 Introduction

5.2 Proposed microstrip antenna design to study the effect of substrate dimensions

5.2.1 Effect of substrate dimensions

5.2.2 Parametric study of proposed antenna

5.3 Conclusion

5.4 References

CHAPTER VI CONCLUSION 159-161

8.1 Conclusion

8.2 Further scope of work
